

Enlightened Industrial Revolution

Protected by
Soliloque License

By James C. Lin of raconteuria 2022-11-17

A. Causes & Errors

1. Pea Index

Global generational curse from a childhood trauma

- The Pea Princess by Hans Christian Andersen
- Coined as the "Pea Index", because it is a qualitative measure that has no logical ceiling of boastfulness.
- It is only a matter of time when the next person who claims to be able to discern
 - frozen pea or if frozen before it becomes mashed pea
 - flavour of the pea
 - temperature of the pea

2. Diddly-Squat Innovations

Limitations of human physiology ignored

- In software, the MP3 compression algorithm is chopping the frequencies beyond upper and lower limits of human hearing capability
- In hardware, thanks to Apple marketing, we are grateful to confirm that the human eye can no longer distinguish pixel density beyond Retina Display
- These confirmations pave the way for the identification of "diddly-squat innovations" based on sensory limits of human physiology

3. Overrated Social Interactions

Humans as Social Animal is an acquired taste

- Masks equalize the impacts of the colour of skin, gender, and age
- Myth busted : human beings are social animals? We do just fine when quarantine is required to survive
- Reduced needs for trendy clothing, luxury accessories, fancy automobiles and lifestyle-brand technology items as priorities change
- Quality of the build, the longevity of products, and the utility value of the said products are more important than brand image

4. Earth Murderers

Industrial Designers & Marketing Professionals

- WiFi stations with exaggerated physical appearance, when not many tasteful interior decorations will leave them out in the open as part of the home/offices aesthetics
- Marketing Professionals, with the slogans, the exaggerated benefits, and that "status-crafting" and "superiority-complex inducing" languages to stimulate unnecessary consumerism

5. Recycling is a hoax

A sorry and convenient excuse

- Humanity invented the concept of "recycling" which by now should have been proven to be a joke. The most recycle ever did was giving industrial designers and marketing professionals to use it as an excuse to perpetuate unnecessary consumption and elevate the guilt that should have been rightfully associated with it
- Recycling takes further energy and resources and for the most part, hides the truth that the proportional recycled amount are laughable in comparison
- It gives companies an easy front to continue diddly-squat innovations and designs
- Recycling is never forcefully observed and practiced under the law, and never held accountable to the environment and mother earth

6. Plastic & Styrofoam are Innocent

The culprit is making them disposable

- If we look at the affordability and longevity of plastic as blessings, we may finally learn our lesson of where we went wrong with it
- Use plastic to make items permanent and supplement with other materials to enhance the structural strength will do wonders
- Humanity will suddenly find itself using and enjoying plastic the correct way without complaining about the need to "recycle disposable plastic" and how harmful it is to the environment
- The same logic applies to Styrofoam

B. Precursors

1. ingénieur vs. suffire

A step back from both sides

- Ingénieur, the mindset of an RD engineer.
 - As long as it works functionally perfectly, industrial design is an afterthought best ignored
- Suffire, the mindset of a consumer.
 - who is satisfied with “suffice”. As long as it works functionally perfect, industrial design is an afterthought best ignored
- Both side meet in the middle and save the world together

2. Masks & Jones vs Pea Index

When social status nor appearance no longer matters

- The silver lining of the Wuhan Virus is :
 - human interaction is overrated, humanity can be perfectly happy with reduced human interactions
 - it is more important to have the natural resources to survive in difficult times
 - keeping up with the Joneses is nonsense

3. Consumerism based society

Social status nor appearance no longer matters

- Capitalism forced “consumerism” on humanity in a way that says : we only purchase “brand new”.
- It is also a status indicator to show off to others. That’s how you measure your success.
- The pandemic gave humanity an opportunity to reset.

C. Solution Set I

Distributed Manufacturing

1. Missile8964

A common standards that levels the playing field

- The Single Board Computer is flattened to 6mm by removing all connectors other than four USB4 Type-C jacks in the middle of all four sides of the PCB.
- This change allows the board to be connected in all directions making it configurable as part of the overall Open Connection Architecture scheme.

1. Missile8964

A common standards that levels the playing field

- it allows electronics parts to be shipped in industrial packaging that are minimal in size and required protective material.
- Electronic components required comes in industrial packaging that are mostly camera-film like strip that allows them to be fed into the SMT machines.

2. Open Connection Architecture

A common standards that levels the playing field

- Only the connector type and its physical coordinates in the 3D is defined
- Any local material can be used to produce casing
- Casing and exterior parts become globally interchangeable, regardless of material used.

3. Externalization of Batteries

It frees up the casing design

- An important component of the concept of Missile8964 is the externalization of the power source, be it battery or solar panels.
- This retro paradigm shift allows any electronics desired to be designed with basic interchangeable parts of Missile8964 to unlimited power source and thermal configurations.
- Mother Board, Touch Pad, Battery, Solar Panel, Screen, Cooling Fans...all of their casings share the exact same physical dimensions.

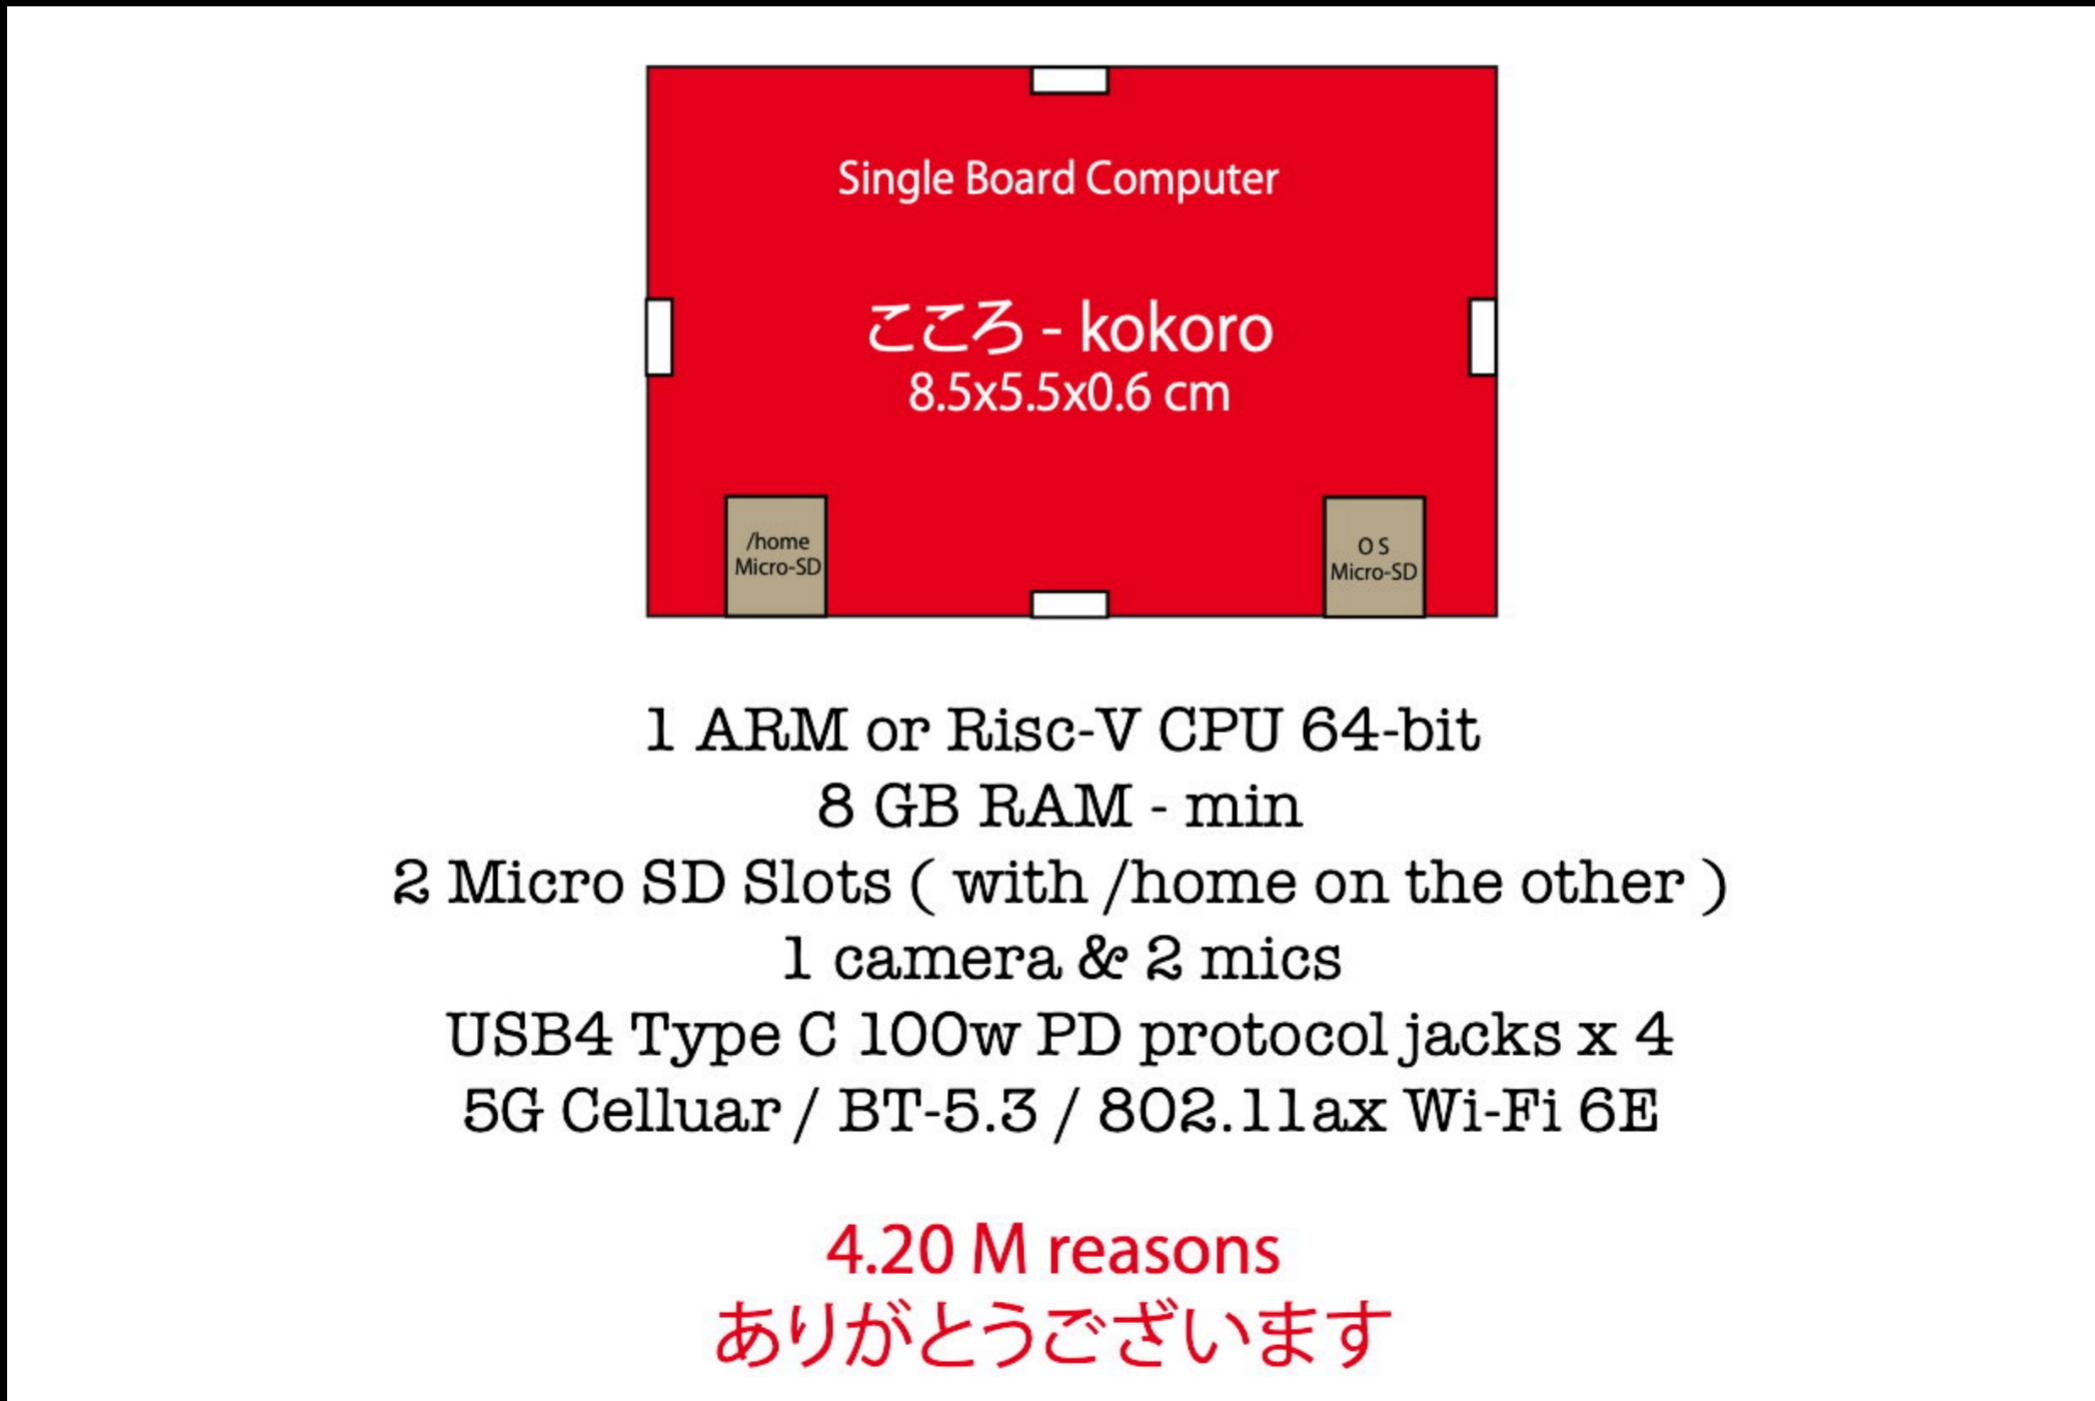

4. Functional Separations

The Benefits

- OCA and external batteries breaks consumer electronics free from two important limiting prisons:
- The need for an assembly army due to the complexity of the associated designs
- It paradigm shifts the core concepts of Industrial Design and puts “Re-Spank-ability” into frontal focus

Example - Missile8964 - 1

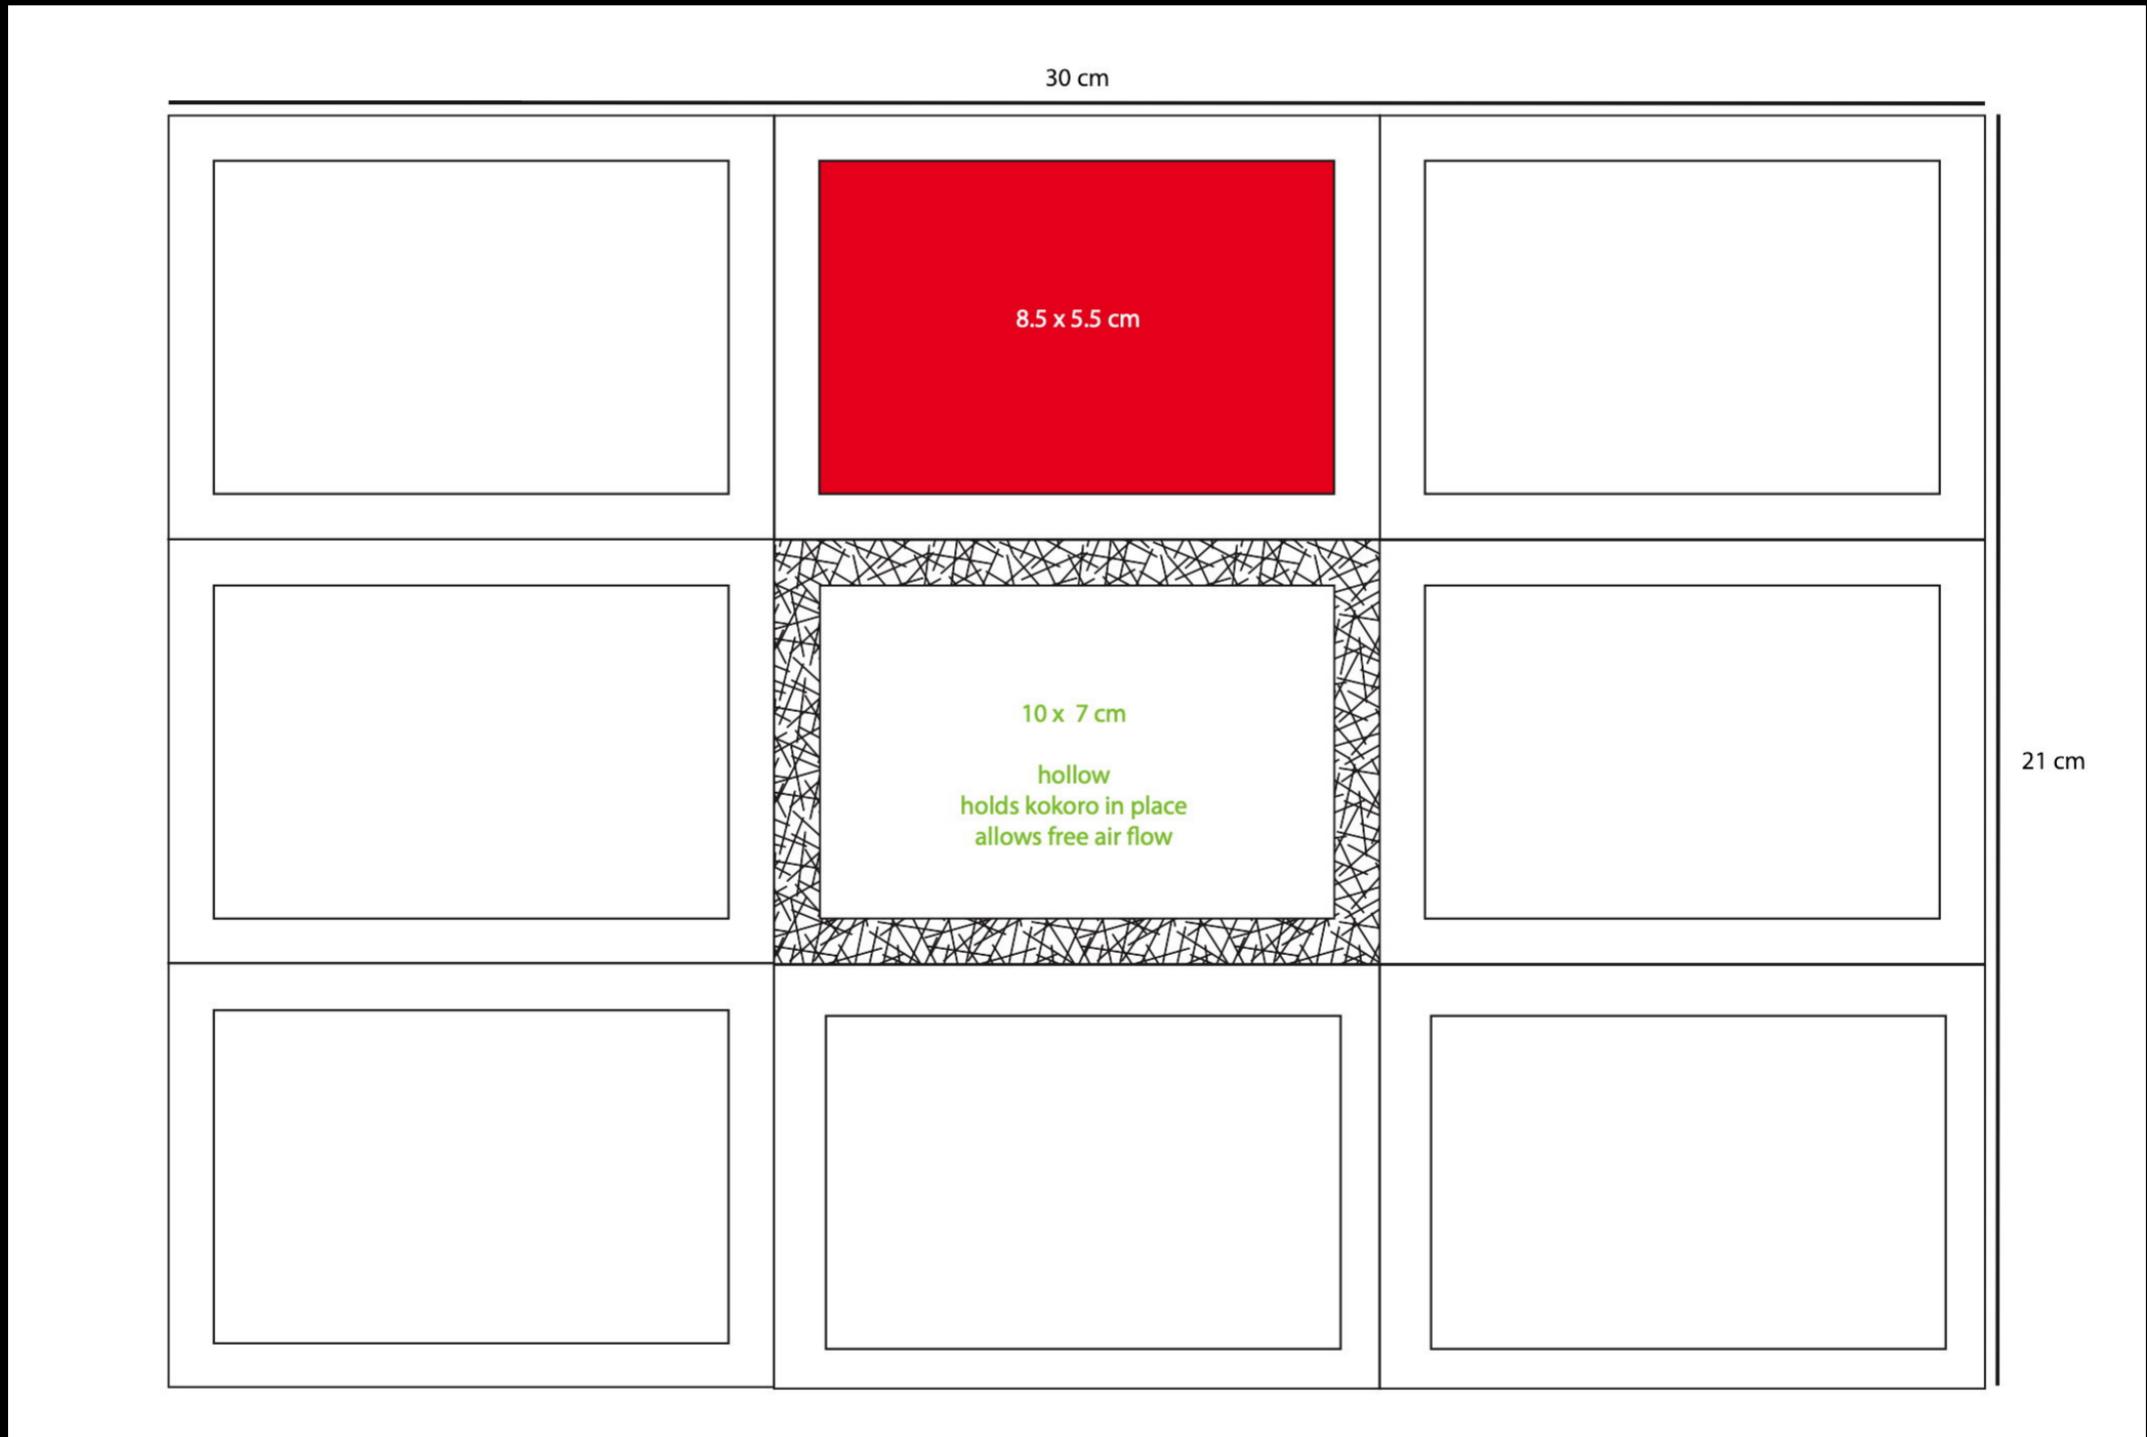

A flattened motherboard of a SBC

USB4 Type-C with 100w PD jacks on all four sides of the PCB
to flatten it down to about 6mm

Example - Missile8964 - 2

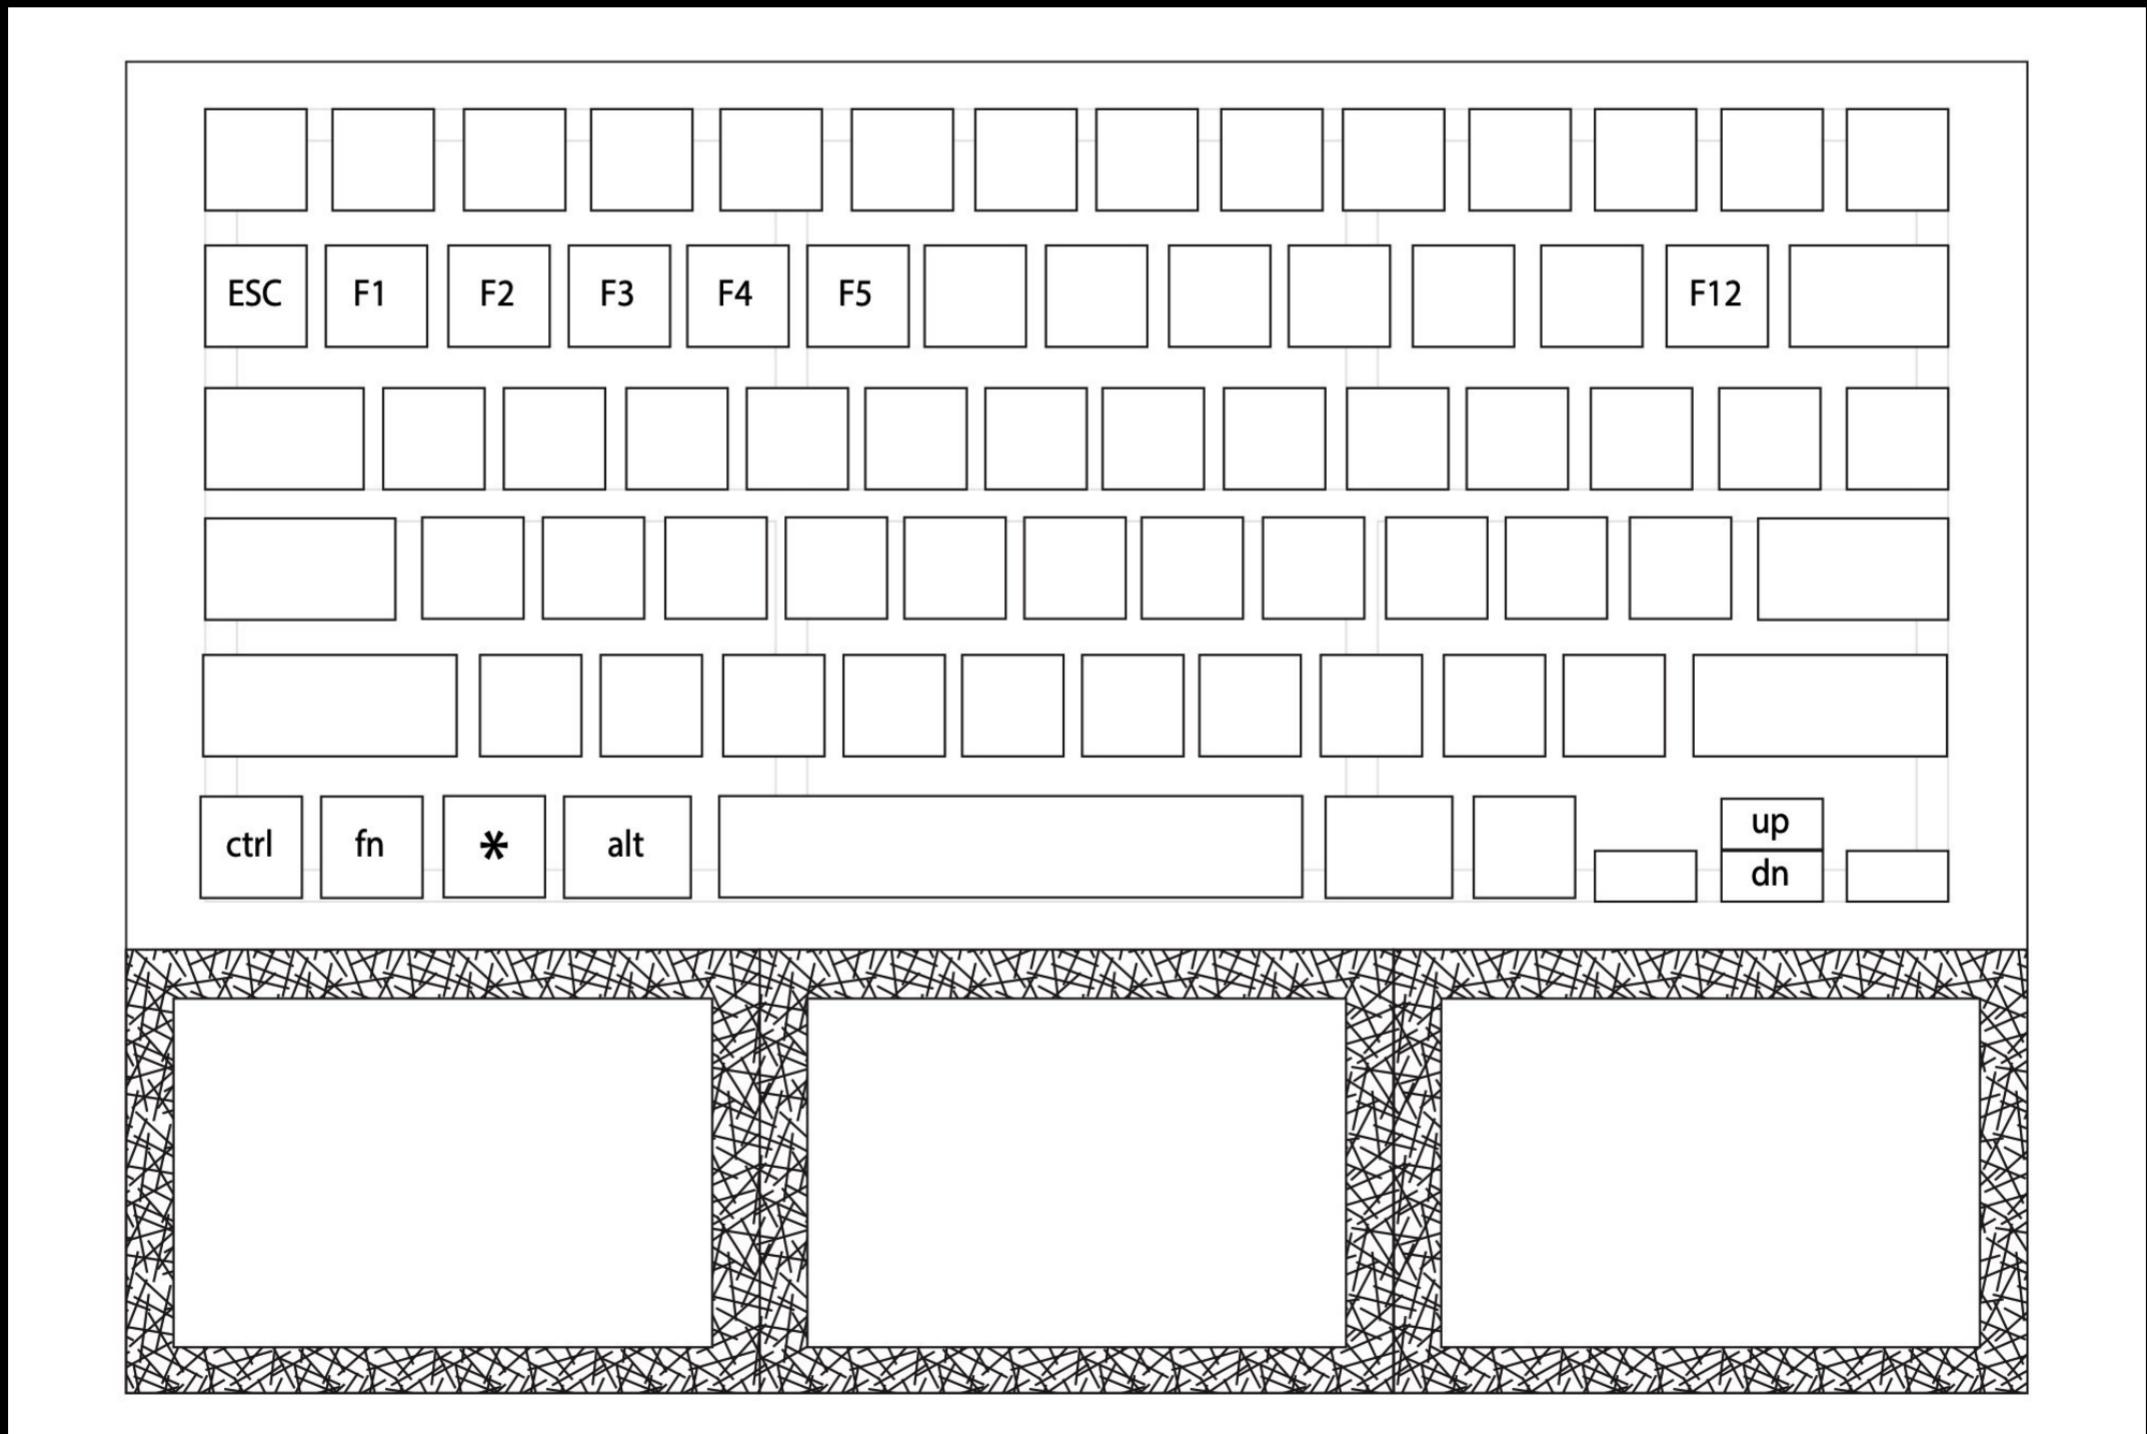

9x9 grid houses standardized components

300x210mm overall, 100x70mm inner mesh frame, and 85x55mm PCB board

Example - Missile8964 - 3

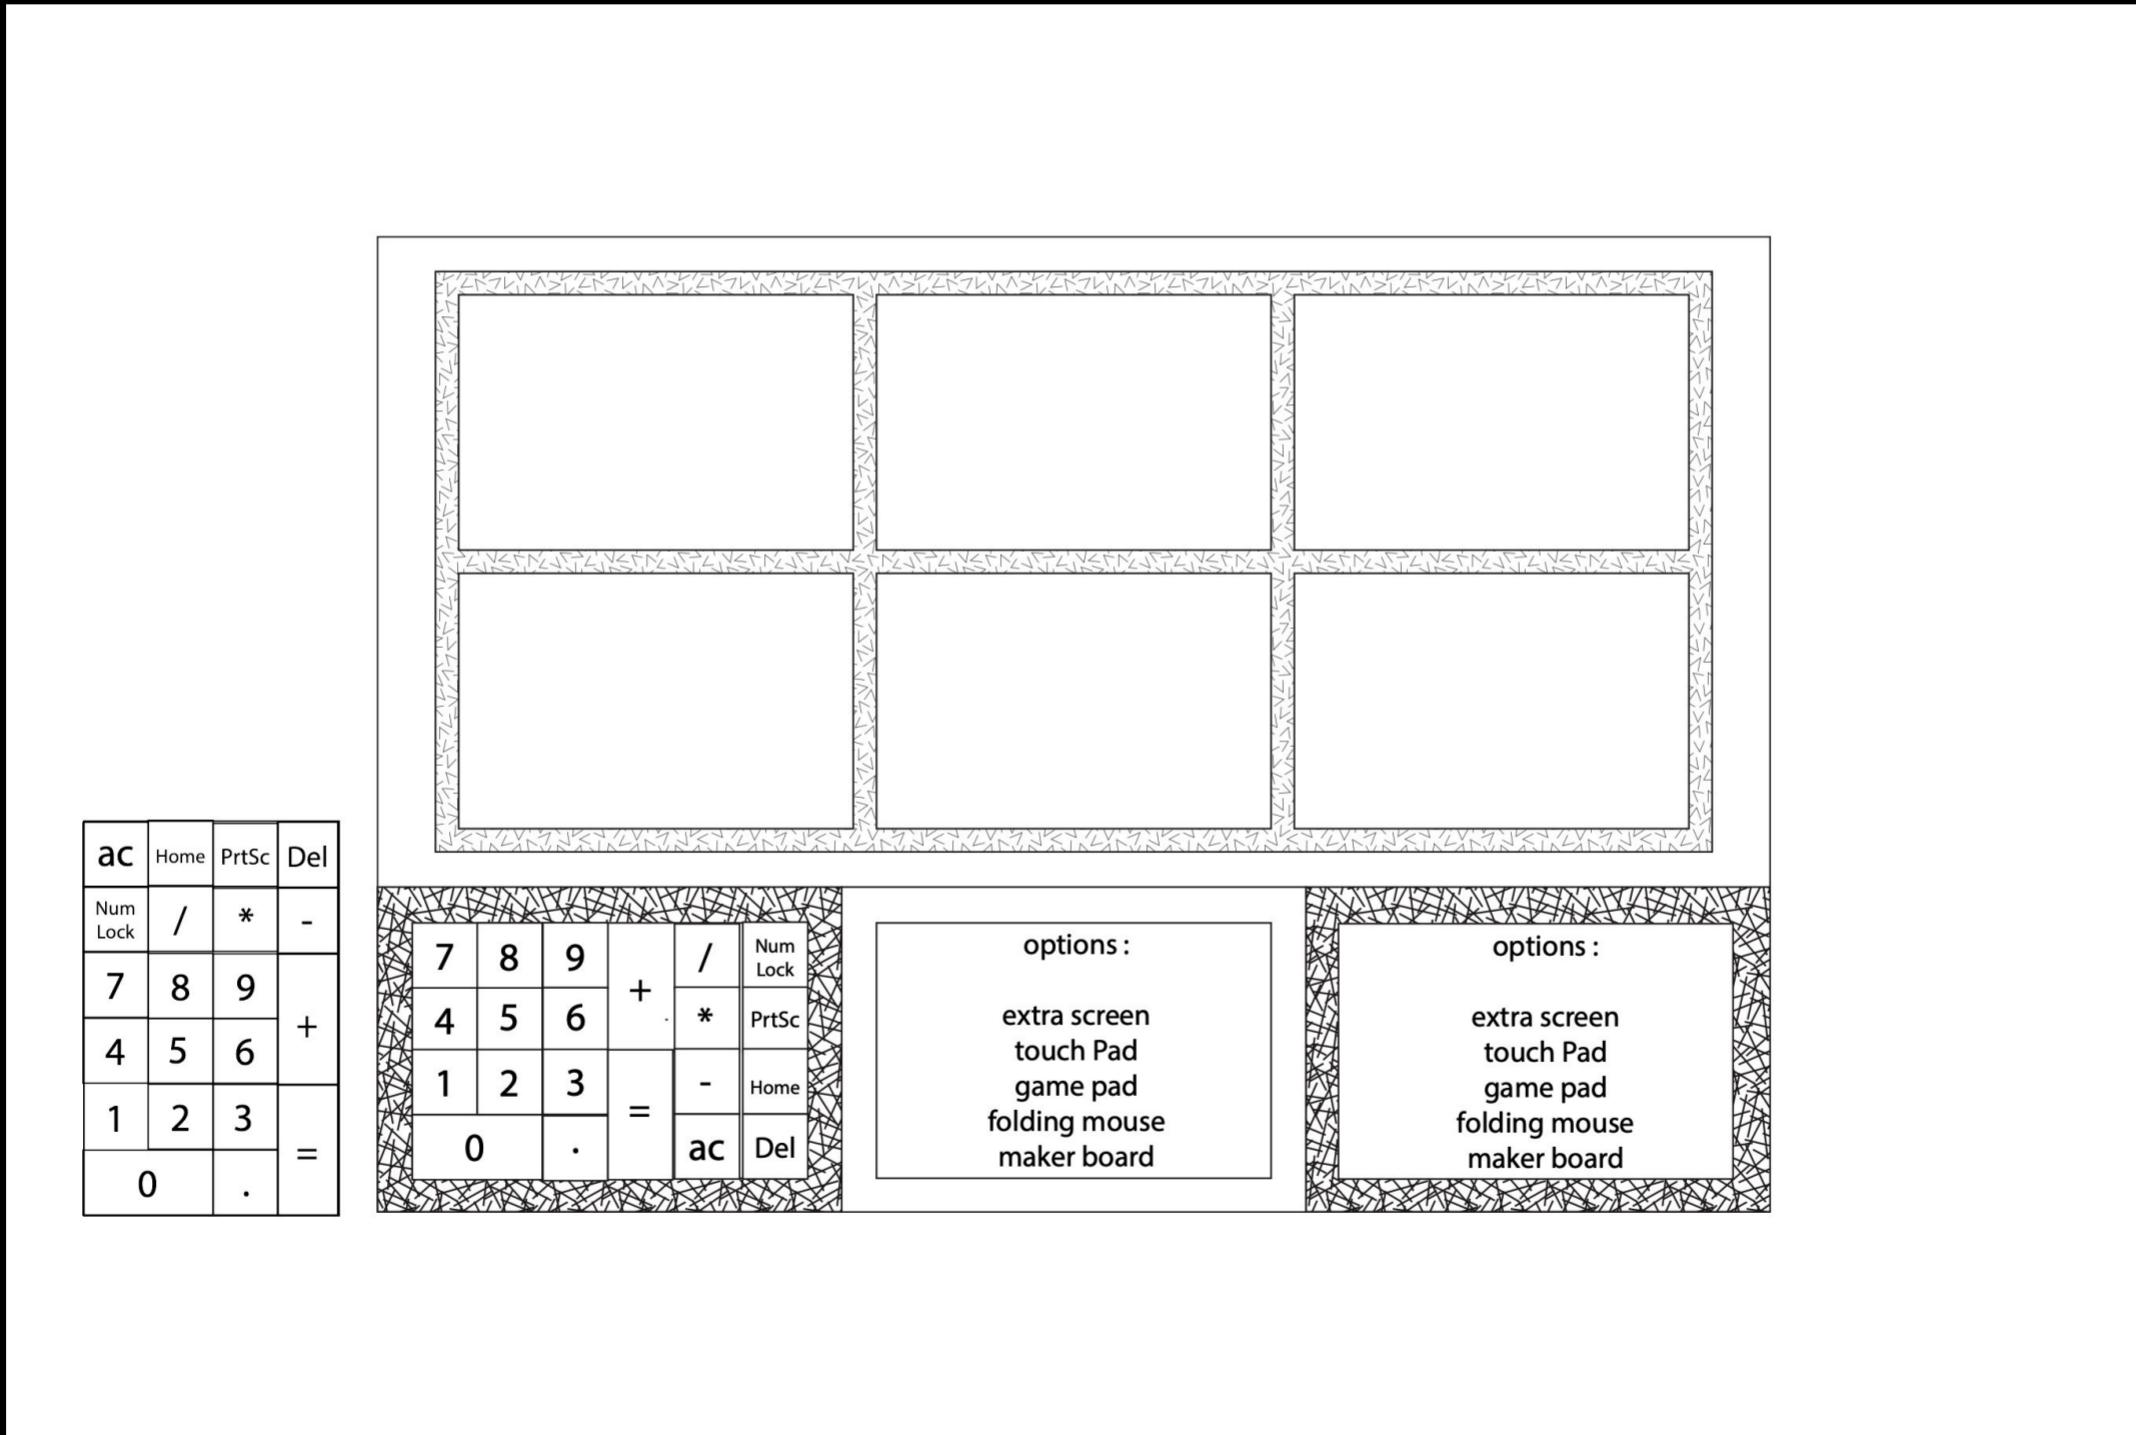

The exterior of the base and keyboard

Keyboard, with extra row of programmables on top

Example - Missile8964 - 4

The endlessly configurable input base

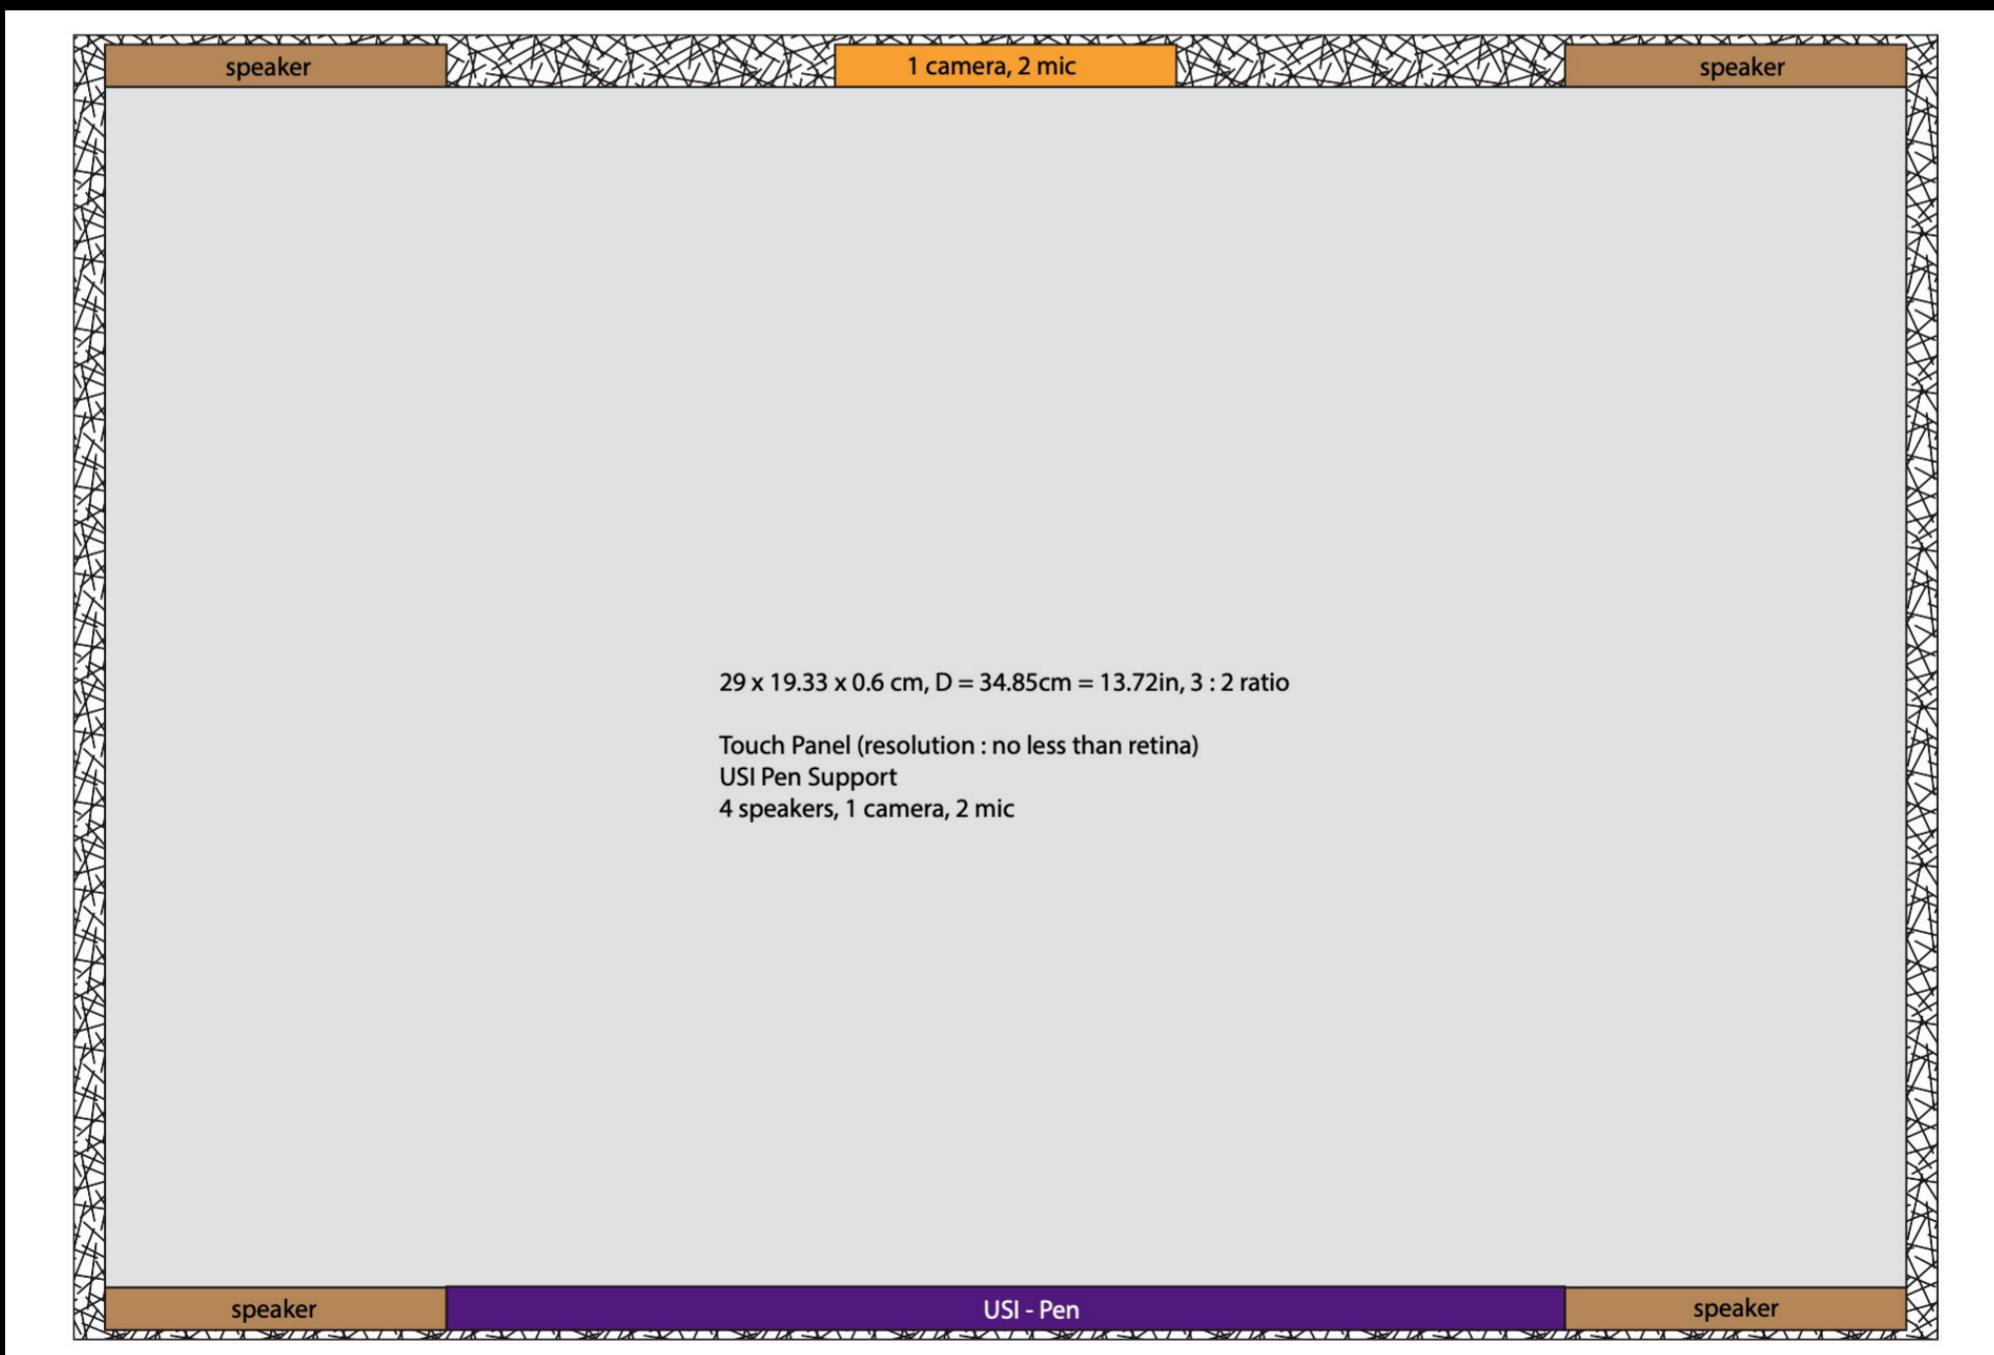

Keyboard PCB divided into 6, lower right allows US vs. UK layout and easy malfunction swap

Bottom 3 slots allows any kind of interchange for dexterity of preference
& any choice combination of input accessories

Example - Missile8964 - 5

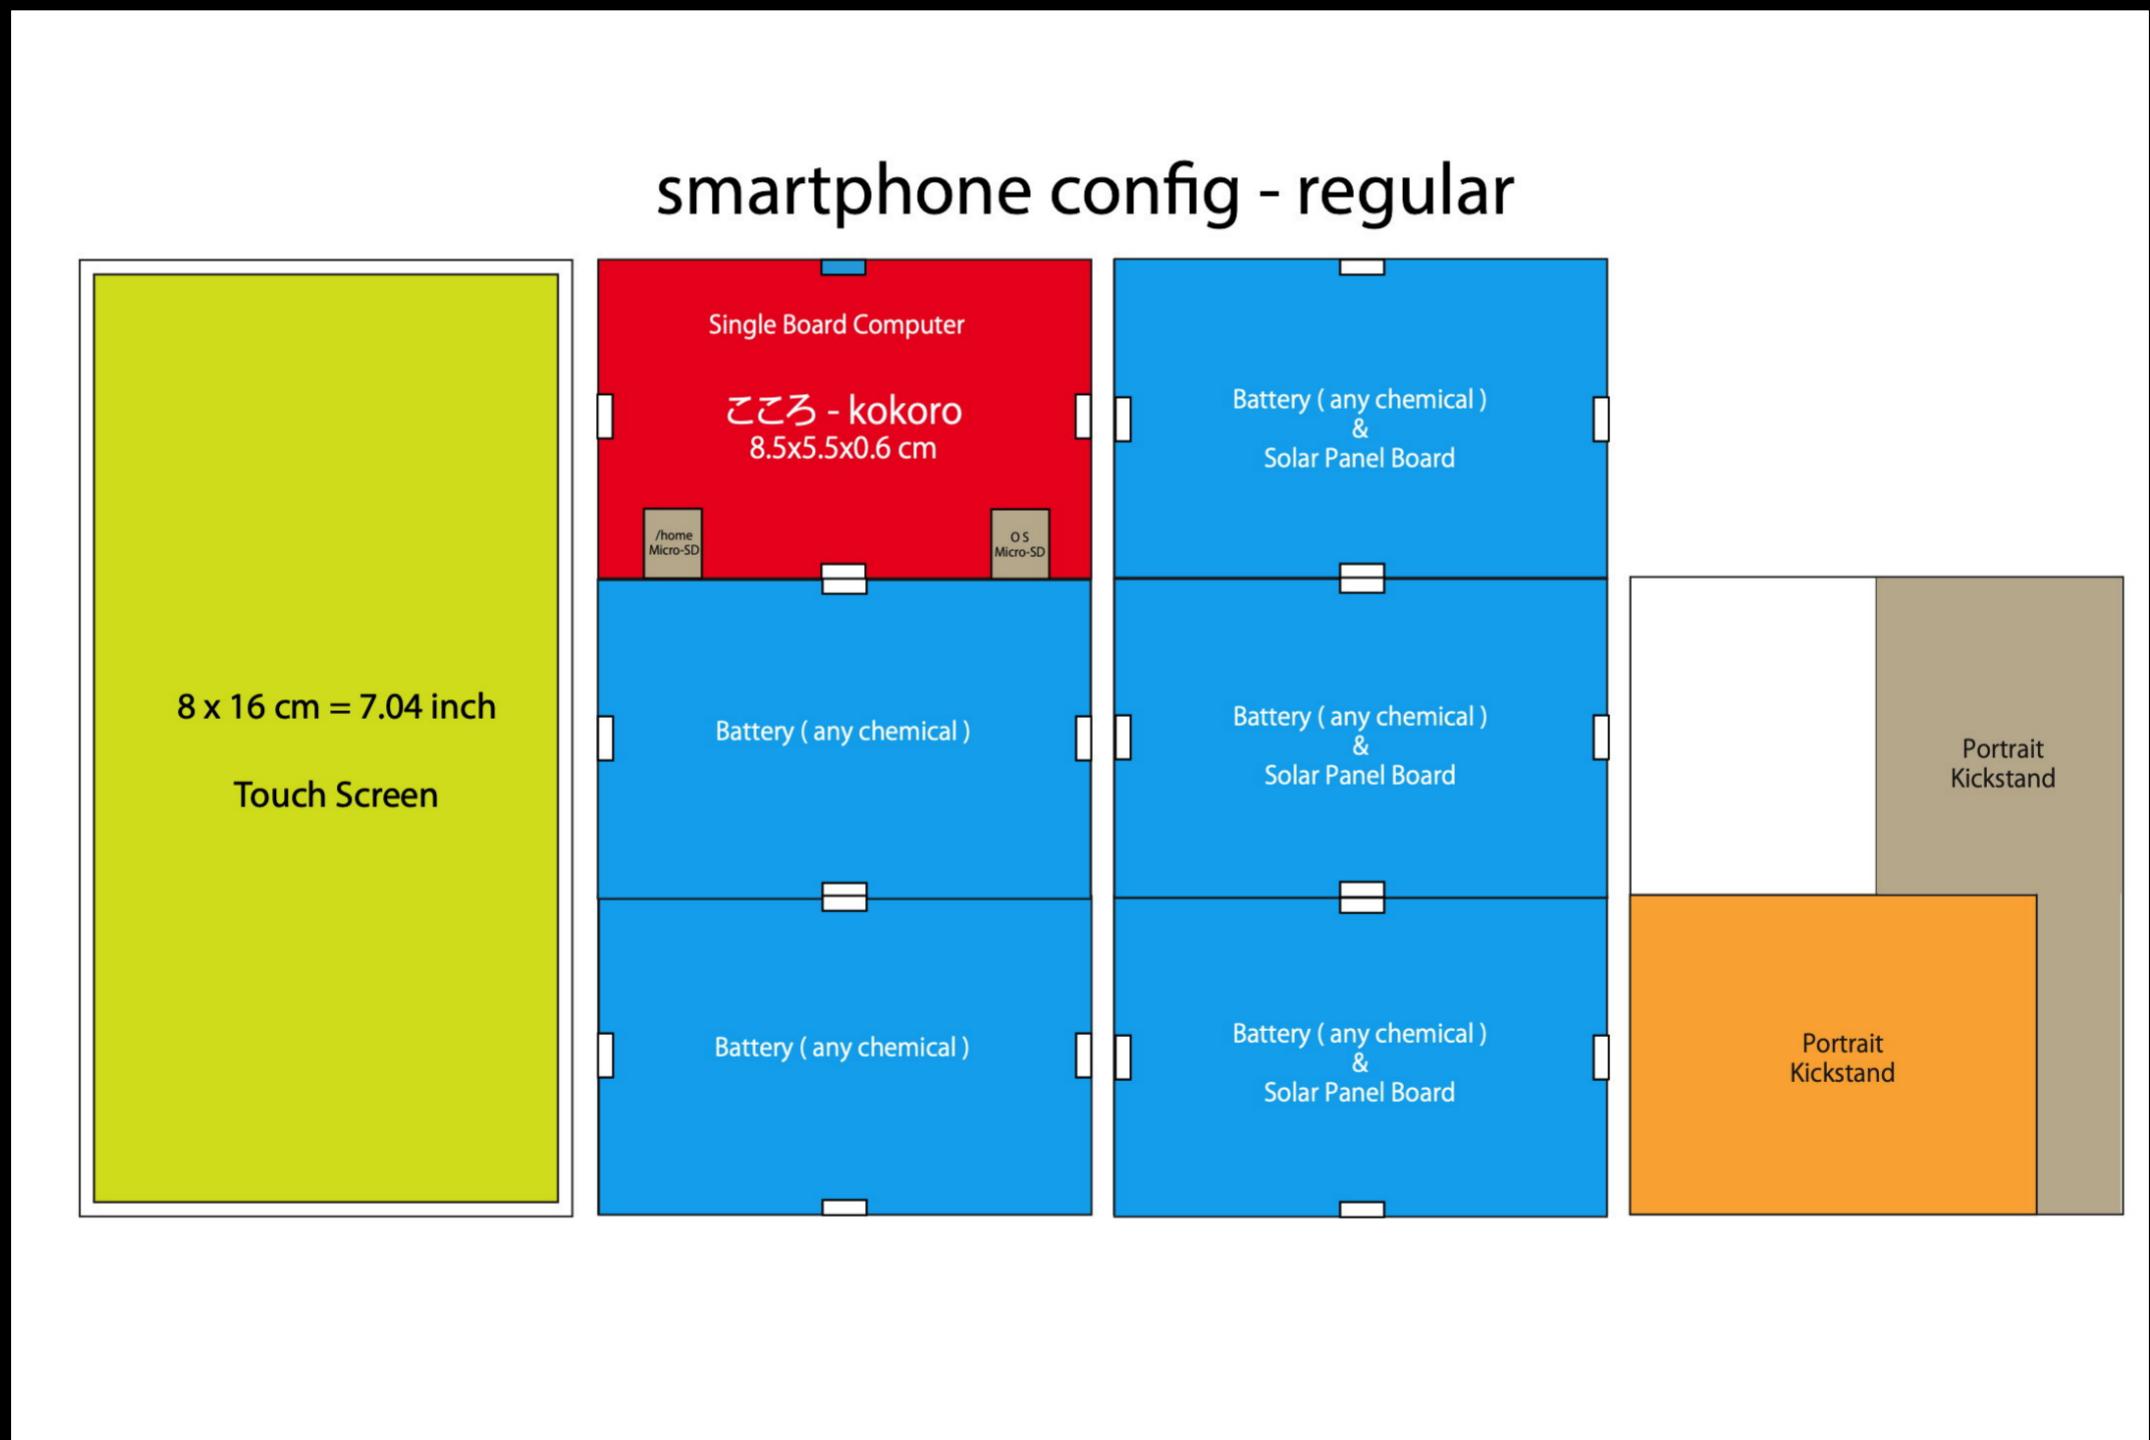

The 3 : 2 NB touch screen

290x193mm = 13.72inch that doubles as a Tablet Computer Housing with USB Pen holder

Example - Missile8964 - 6

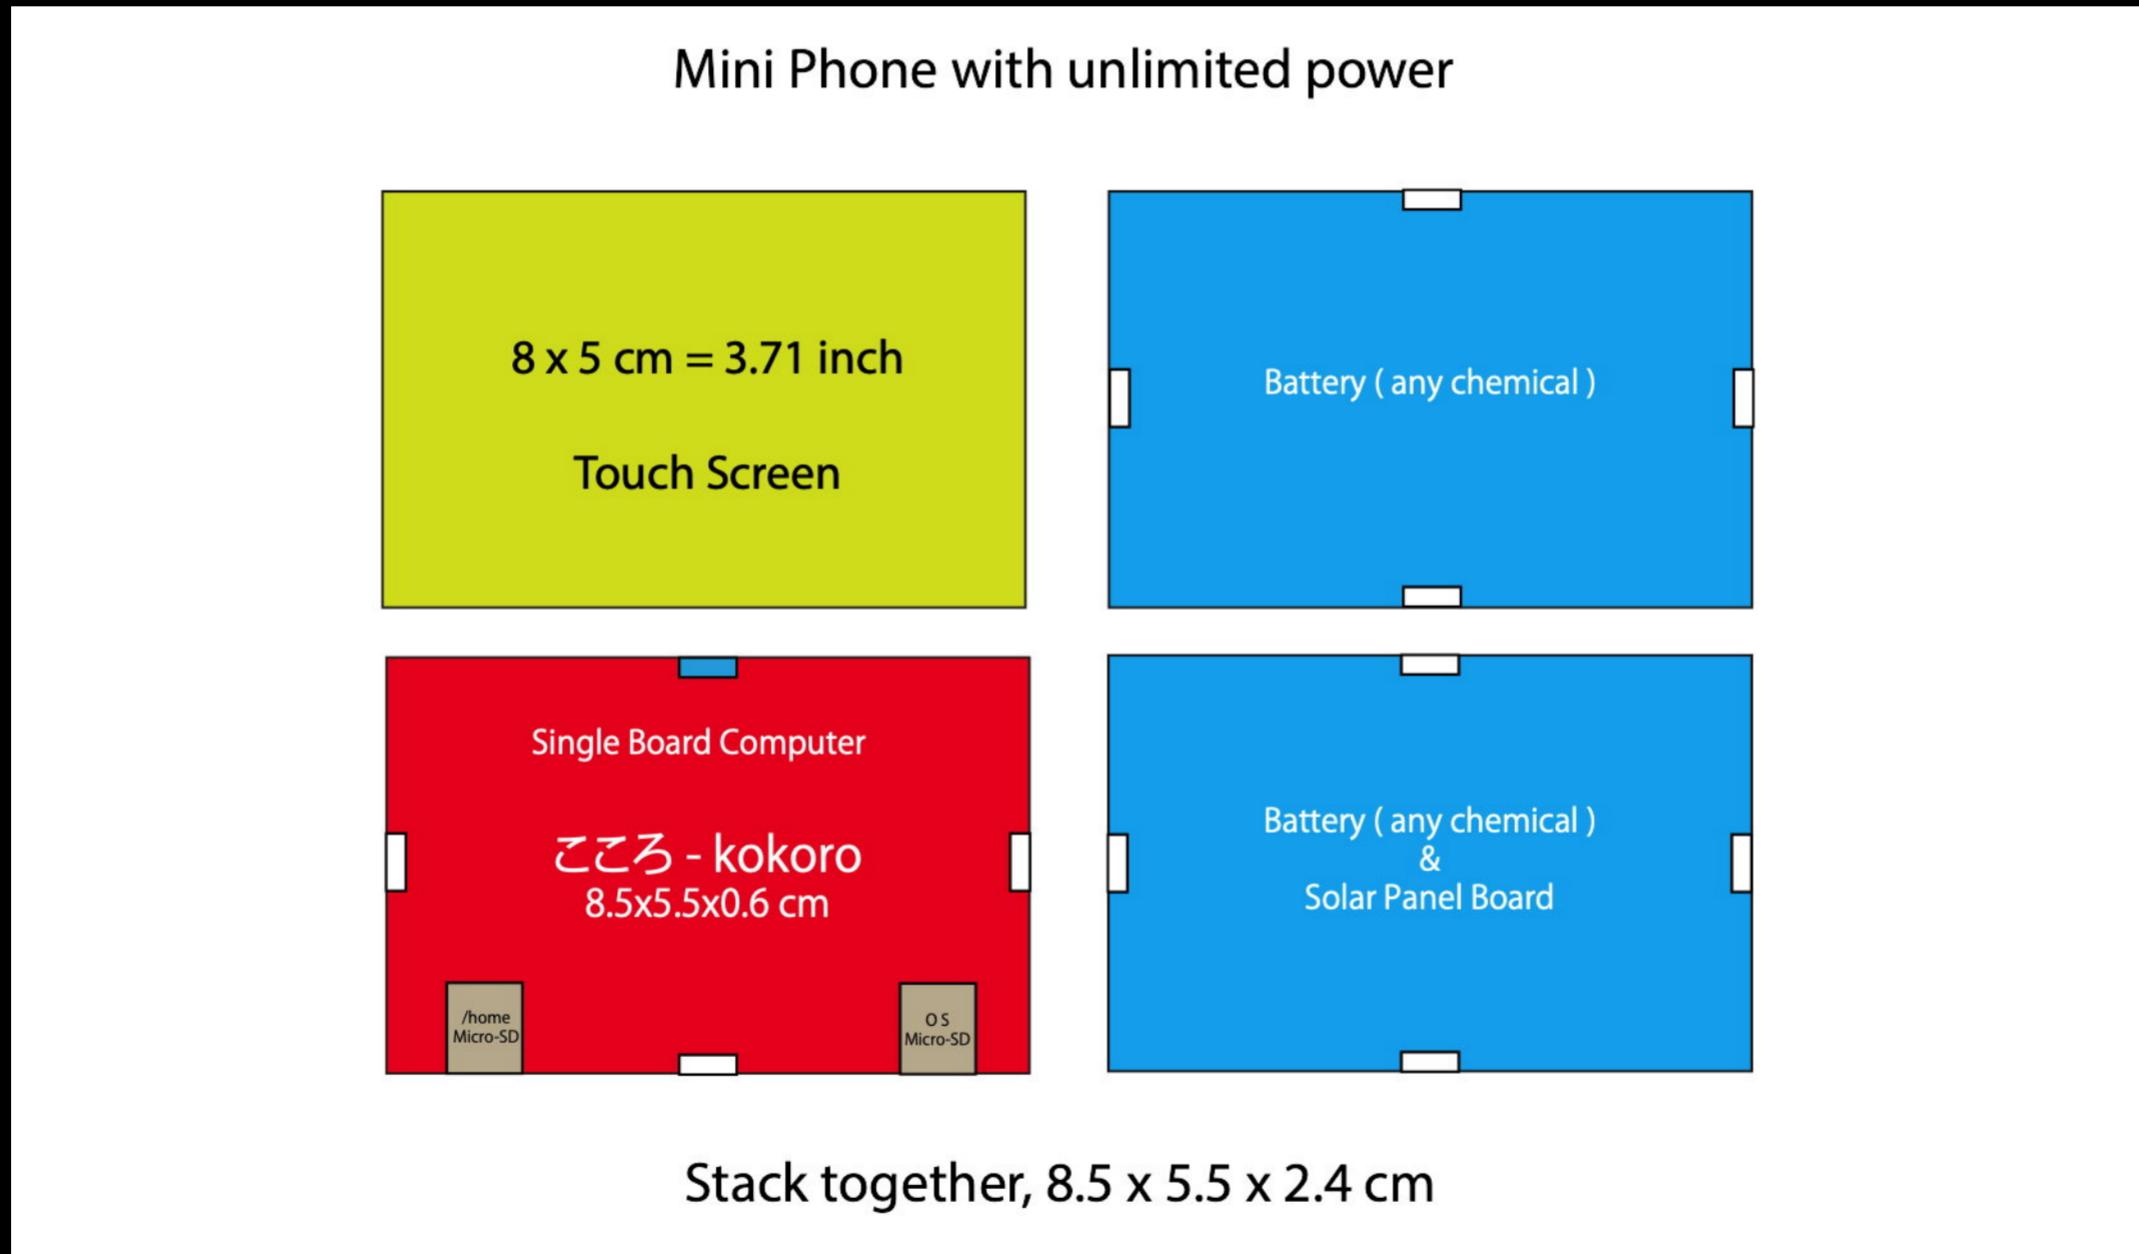

Modular Smartphone of unlimited power source

The same components can easily swap into a smartphone with 7.04inch screen
Of unlimited battery life, with or without solar panels

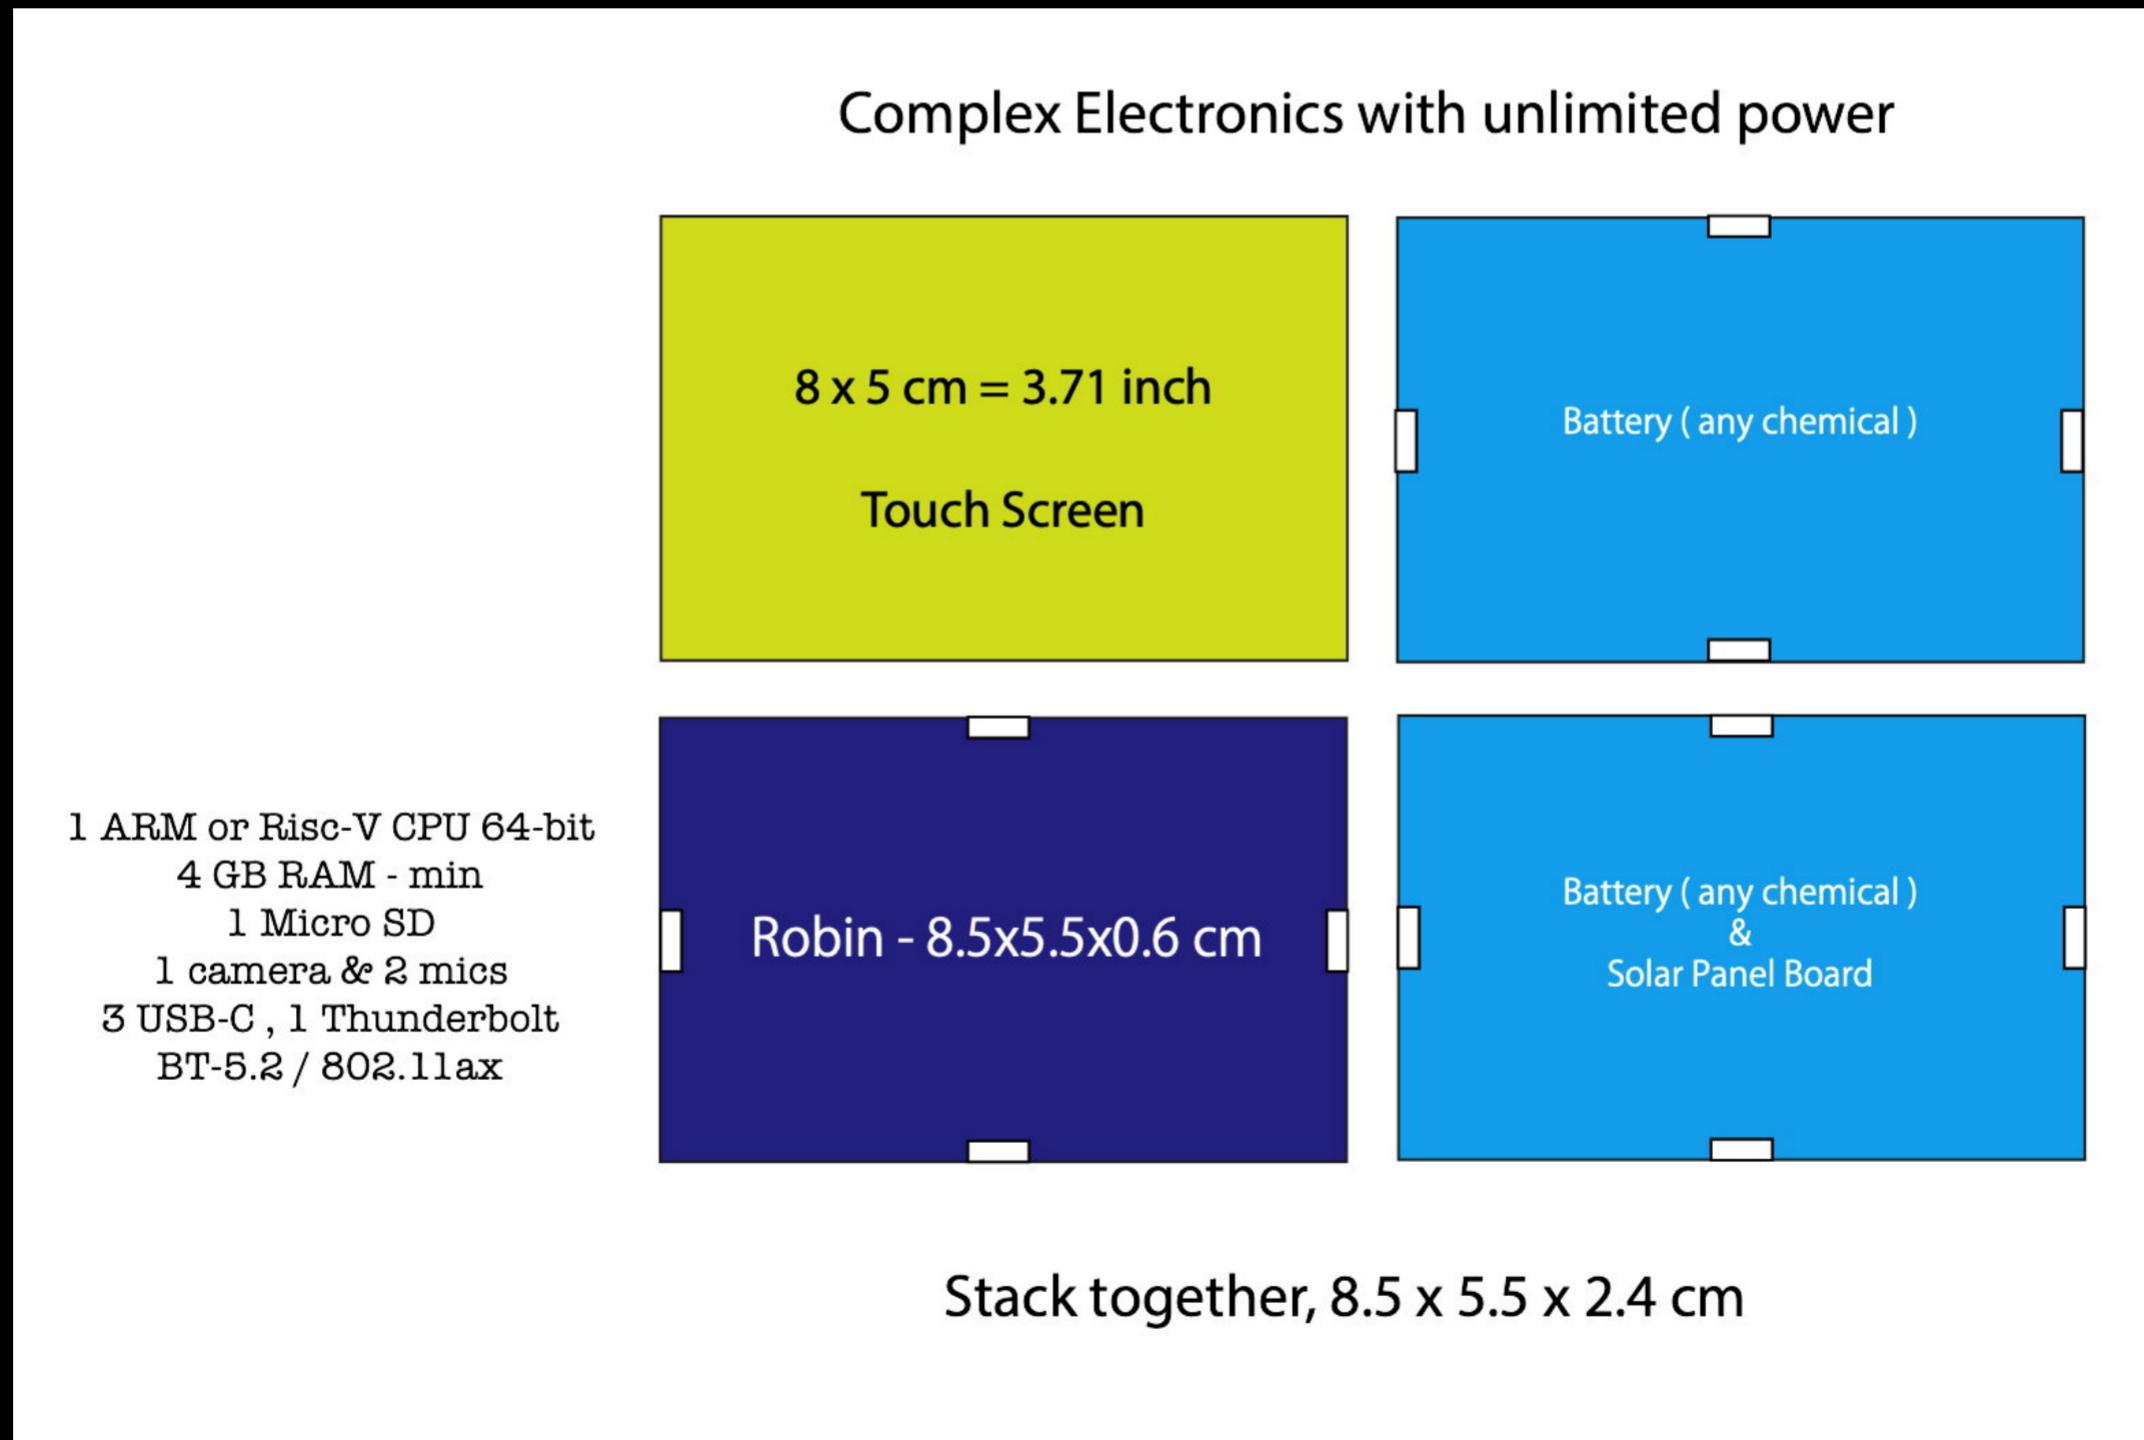

Example - Missile8964 - 7

Modular mini-phone of unlimited power source

Example - Missile8964 - 8

Functional Electronics with Removable Screen

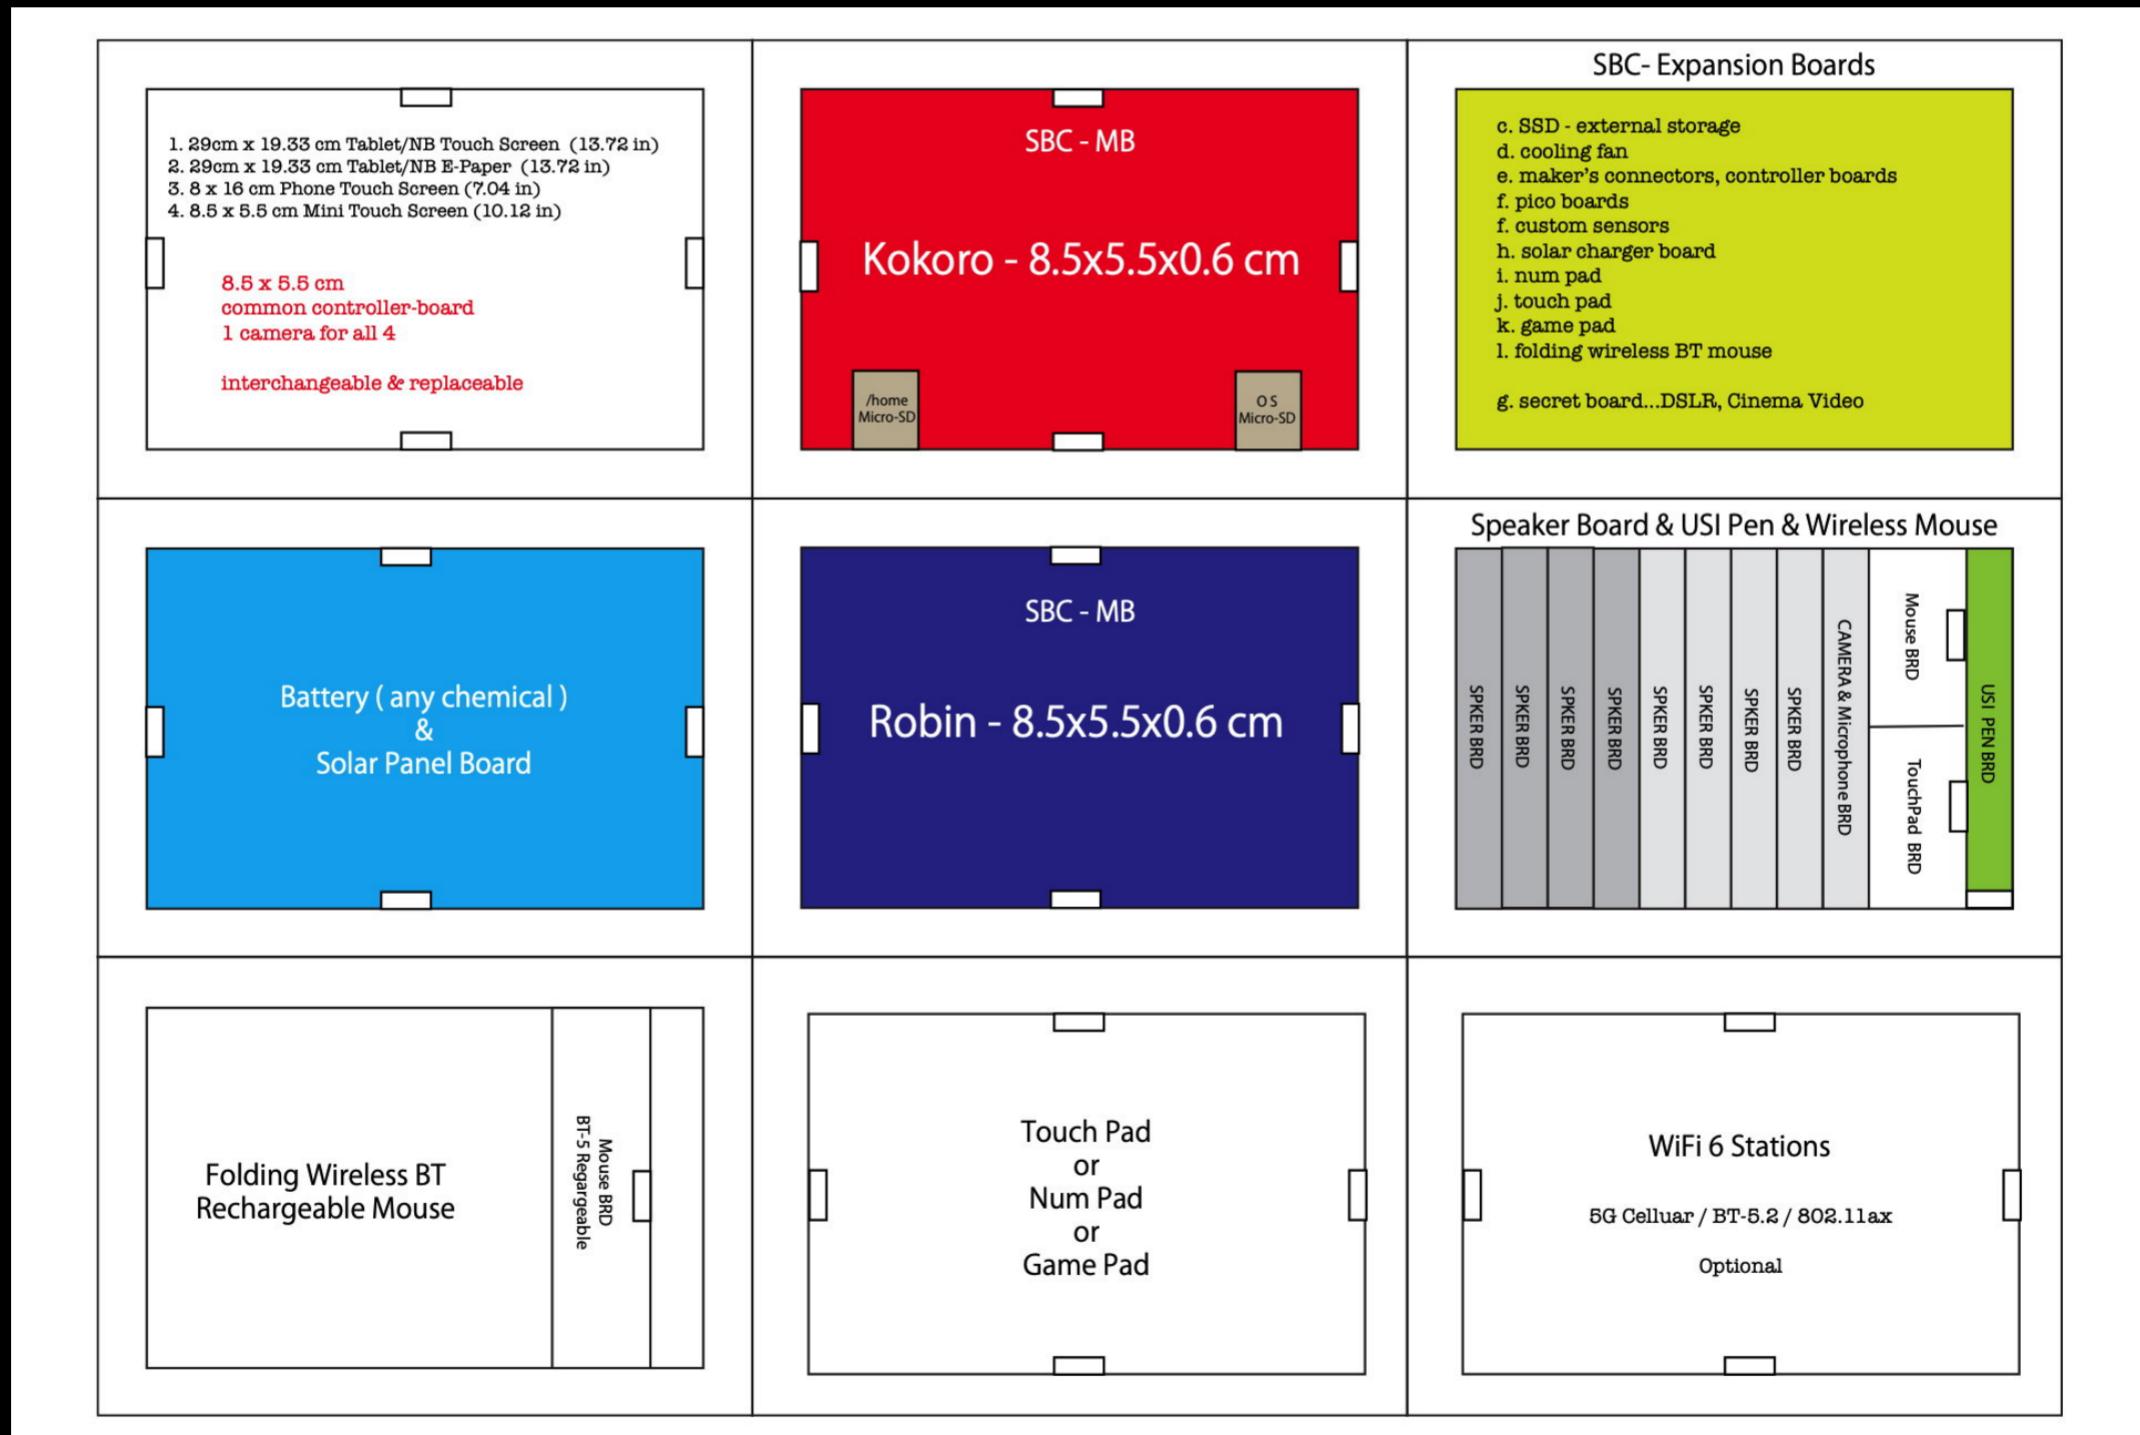

Option to remove the screen after setup, makes IoT possible everywhere and easily implemented

No IoT companies needs to design specialized hardware anymore

Example - Missile8964 - 9

Endless possibilities

Endless possibilities when the physical dimension is standardized 85x55x6mm

Local technology manufacturing in EVERY NATION in the world

4. Missile8964 as devil or angel ?

Weaponize or hospitalize

- Equips soldiers with multi-cpu computing device and required combat electronics cheap and easy to carry and service on the battle field
- Field hospitals equipped with supercomputers for war zones or remote villages on earth anywhere. Easy to deliver, setup, maintain.

5. OCA and DM on DSLRs

An honourable viability

- The need for an assembly army whose job are to assemble products due to the complexity of the associated designs. However, they are not necessary at all under good OCA and External Batteries.
- Perfect for powerful DSLRs and Mirrorless Cameras when upgrading the core DSP is a 5 second easy swap of the PCB.

6. OCA and DM on Automobiles

An honourable viability

- Imagine a world of automobiles....
- All doors, engine hoods, fenders and tailgates are interchangeable across all brands of automobiles.

D. Solution Set II

ReSpanking

1. ReSpank-ing Forward

Ditch the Recycling Hoax

- Products can be designed with parts of extreme reusability, especially the outer cosmetic changes in industrial design.
- OCA allows the exterior to be ReSpankable even from different competing vendors of the same type of product.

2. 3D printing and light CNC

Ditch the Recycling Hoax

- These two technologies allows the exterior casing to be manufactured locally using local material when combined with the OCA concept.
- NBs can be made with bamboo, dried leafs, or local minerals that can be easily refined. Even from recycled soda cans, locally, manually, crudely.

3. Local materials for the casing

Ditch the Recycling Hoax

- If the casing you need within the Missile8964 framework have different levels of thermal or structural needs, it is even possible to make casings that fit in from:
 - Fallen maple leaves and maple syrup
 - Clay and mud if you usually make pottery
 - Melted beer can (aluminum) or whatever metal available
 - Blown Glass
 - Pulp of any source material
- Better yet, mix and match them to produce ONE computing device

4. Nine Levels of Re-Spanking

Ditch the Recycling Hoax

	Grade	Missile8964	DSLRs	Automobile
1	Aerospace	-	-	-
2	Medical	S	S	S
3	Military	S	S	S
4	Enterprise	S	S	S
5	Consumer	S	S	S
6	Pre-Owned	S	S	S
7	Donation	D	D	D
8	Free-Exchange	F	F	F
9	DIY-Artisans	F	F	F
*	Legend -> F-free, S-sale, D-donate			

E. Solution Set III

PreIncarnation of Packaging Boxes

1. Corrugated Carton Box

PreIncarnate the packaging

- The material had been made into furnitures and other useful household items.
- Have a laser-cutter template online and the laser cutters or die-cutters at the local library.
 - Large - accumulate for larger items
 - Small - cut, fold and assemble
- Or allow local recycle professionals to make and sale them

1. Corrugated Carton Box

PreIncarnate the packaging

- The material had been made into furnitures and other useful household items.
- Have a laser-cutter template online and the laser cutters or die-cutters at the local library.
 - Large - accumulate for larger items
 - Small - cut, fold and assemble
- Or allow local recycle professionals to make and sale them

1. Corrugated Carton Box - 1

PreIncarnate the packaging - Notebook

A monitor hood to reduce the need for brighter screen and better colour accuracy in daily use
Also, a kickstand to tilt the keyboard with elevation for better ergonomics

Left : the flattened shapes, Right: Folded in 3D

1. Corrugated Carton Box - 1

PreIncarnate the packaging - Notebook

Total extra cost for both : about USD \$2, just the cost of the velcro needed, and black paint
And the corrugated carton the NB came in, is pre-incarnated while ditching the recycling hoax

Weight of monitor hood : 85g , and the kickstand 31g (one made with aluminum weights > 300g)

1. Corrugated Carton Box - 2

PreIncarnate the packaging - Toys

Source : <https://www.cartonking.com.tw>, a restaurant decorated with carton furnitures

1. Corrugated Carton Box - 3

PreIncarnate the packaging - Furnitures

Source : <https://www.cartonking.com.tw>, a restaurant decorated with carton furnitures

1. Corrugated Carton Box - 4

PreIncarnate the packaging - theme park ride

Source : <https://www.cartonking.com.tw>, a restaurant decorated with carton furnitures

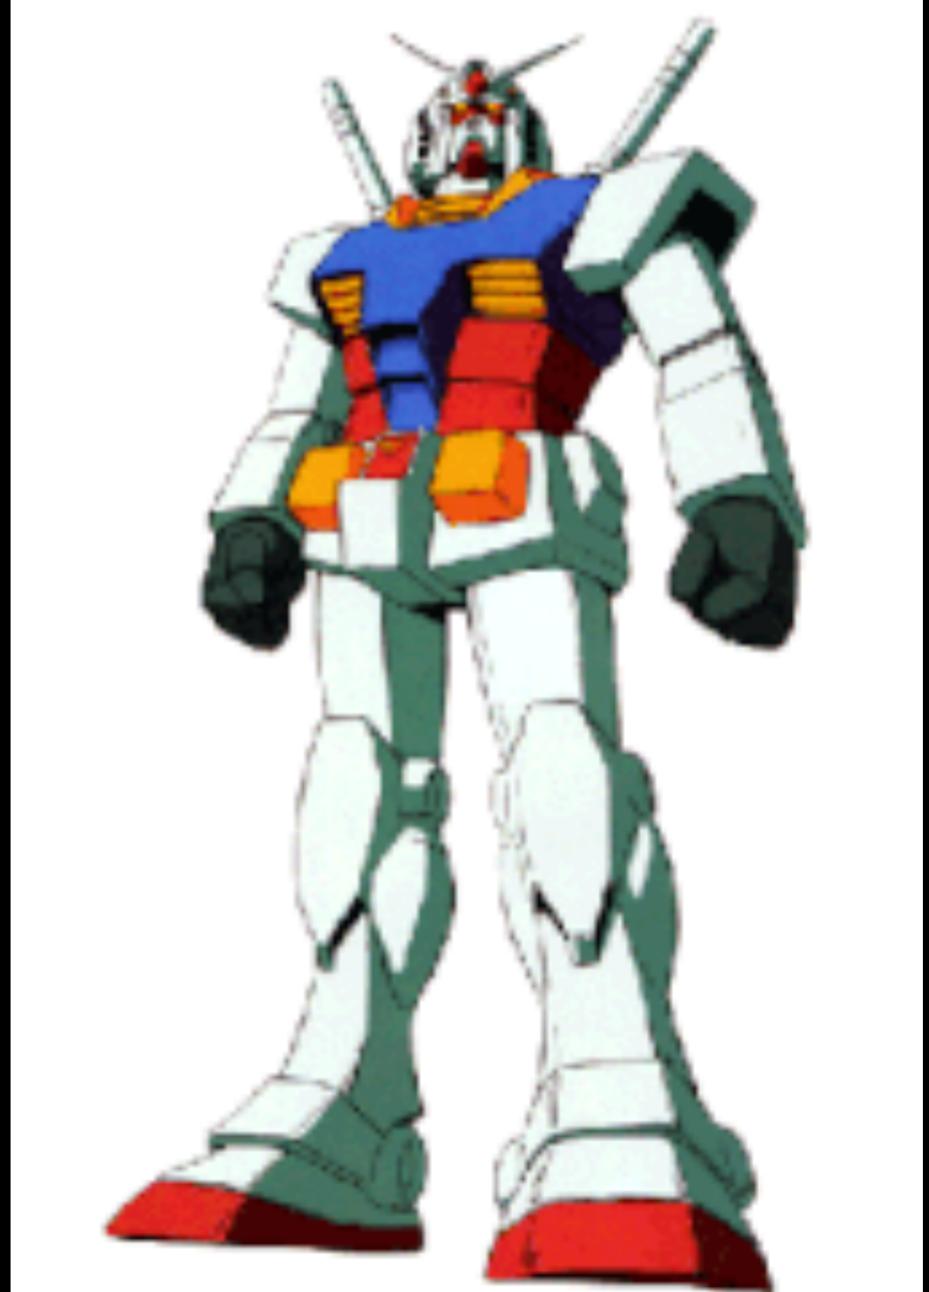

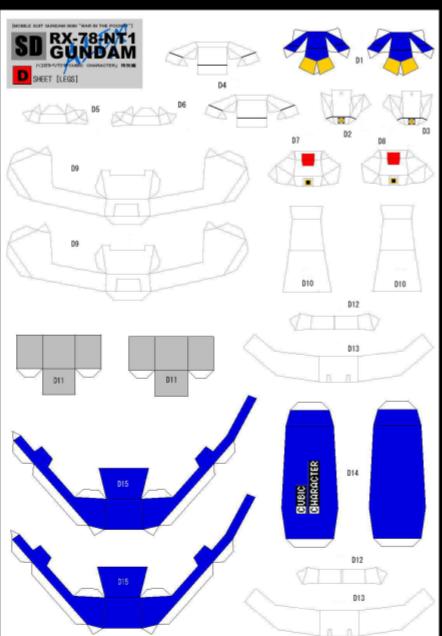

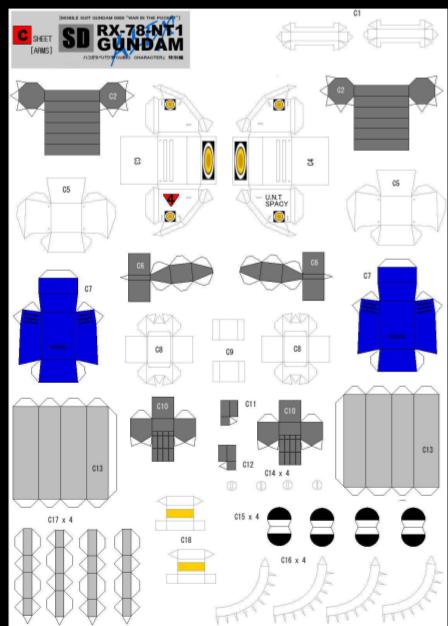

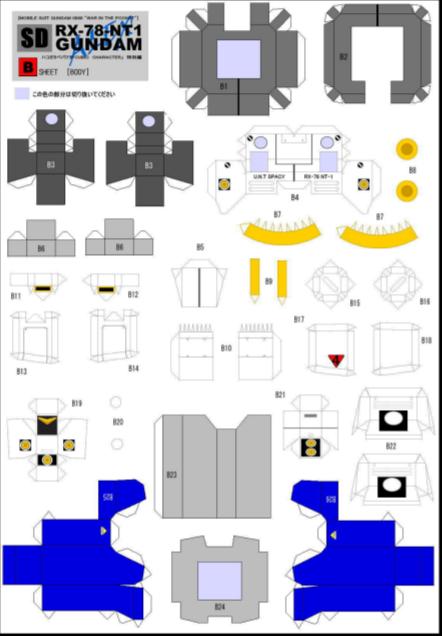

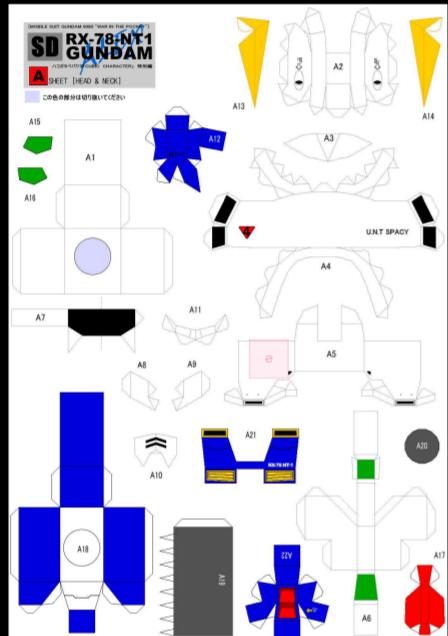

2. Printed Paper Box

PreIncarnate the packaging by printing both sides

- By addition. Print the inside instead of leaving them blank.
- Printable - models, stationaries, other paperboard based toys for kids, etc.
- Invertible - reuse the box inside out for gift box or other storage. The originating company can print a tiny logo for “goodwill marketing”

2. Printed Paper Box - 1a

PreIncarnate the packaging - Printable Toys

These four A4 printable make an original
RX-78 Gundam (fictional Japanese animation robot)
paper model

Source: online somewhere, collected more than 15 years ago

2. Printed Paper Box - 1b

PreIncarnate the packaging - Printable Toys

Source : <https://www.freepik.com>

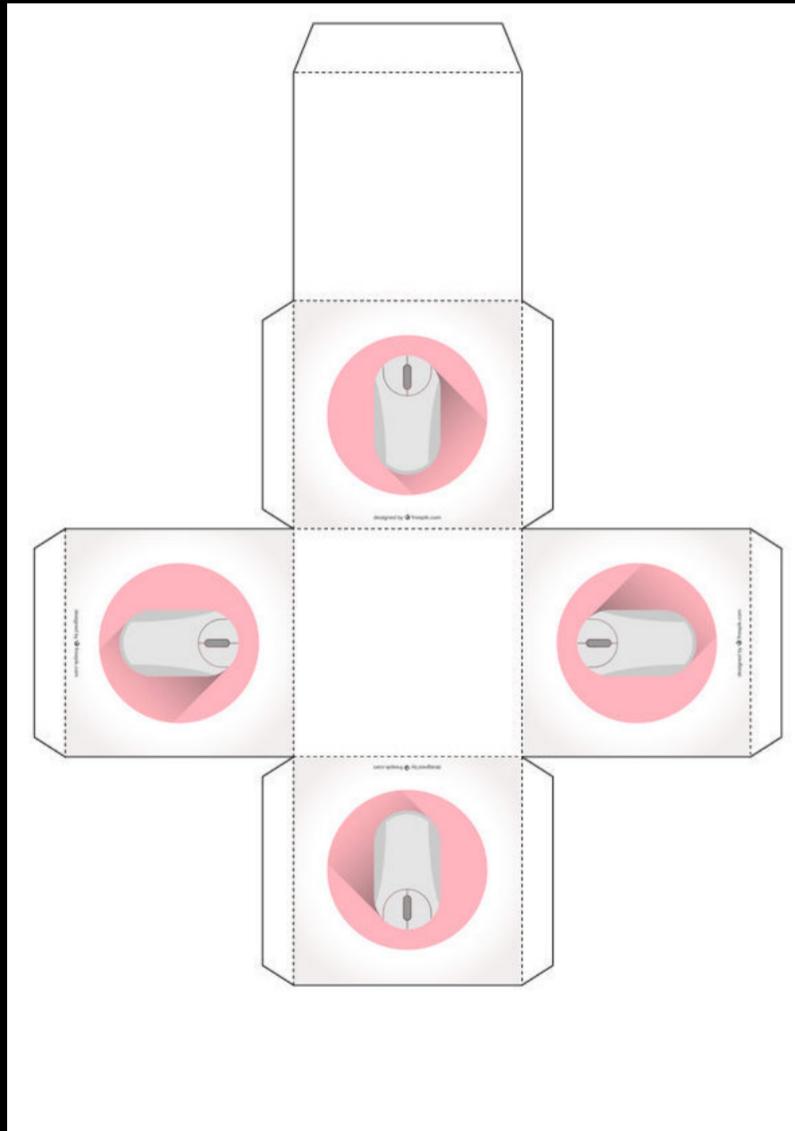

2. Printed Paper Box - 3

Goodwill marketing by origami

- The inside of the box can be printed with other fine origami items of they are large enough.
- The large side of a box for 16 inch screen can be used to fashion a tasteful:
 - Penholder
 - Airplane for kids
 - ...endless possibilities

2. Printed Paper Box - 4a

Pre-Incarnate - inversion - print both sides

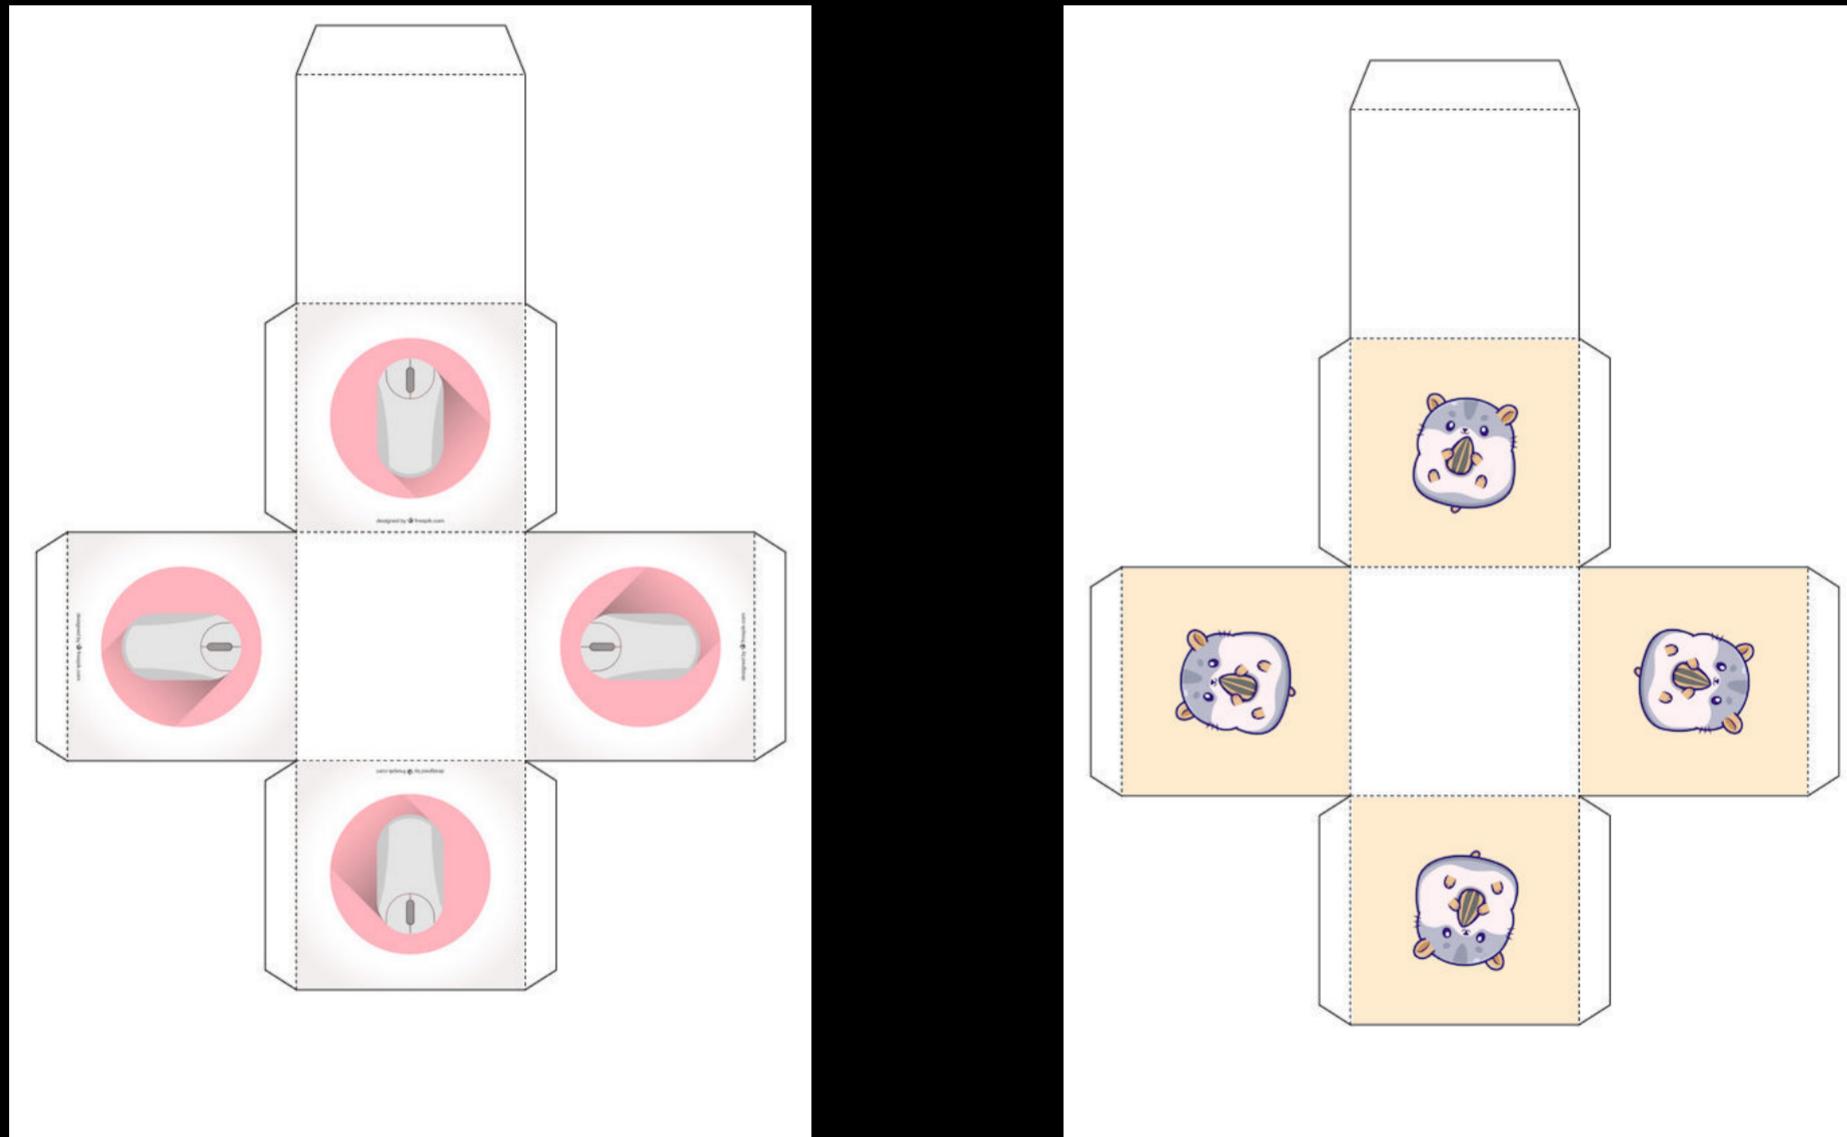

Print both sides so that once the first mission is accomplished, it can be pre-incarnated to the next purpose. This example is turning it into a **gift wrap for the holidays**.

It is also an option to build shelves from the “outer carton boxes” and turn it into a storage system. The original contributor is welcomed to print a small logo for “goodwill marketing”.

2. Printed Paper Box - 4b

Pre-Incarnate - collaborative - give forward

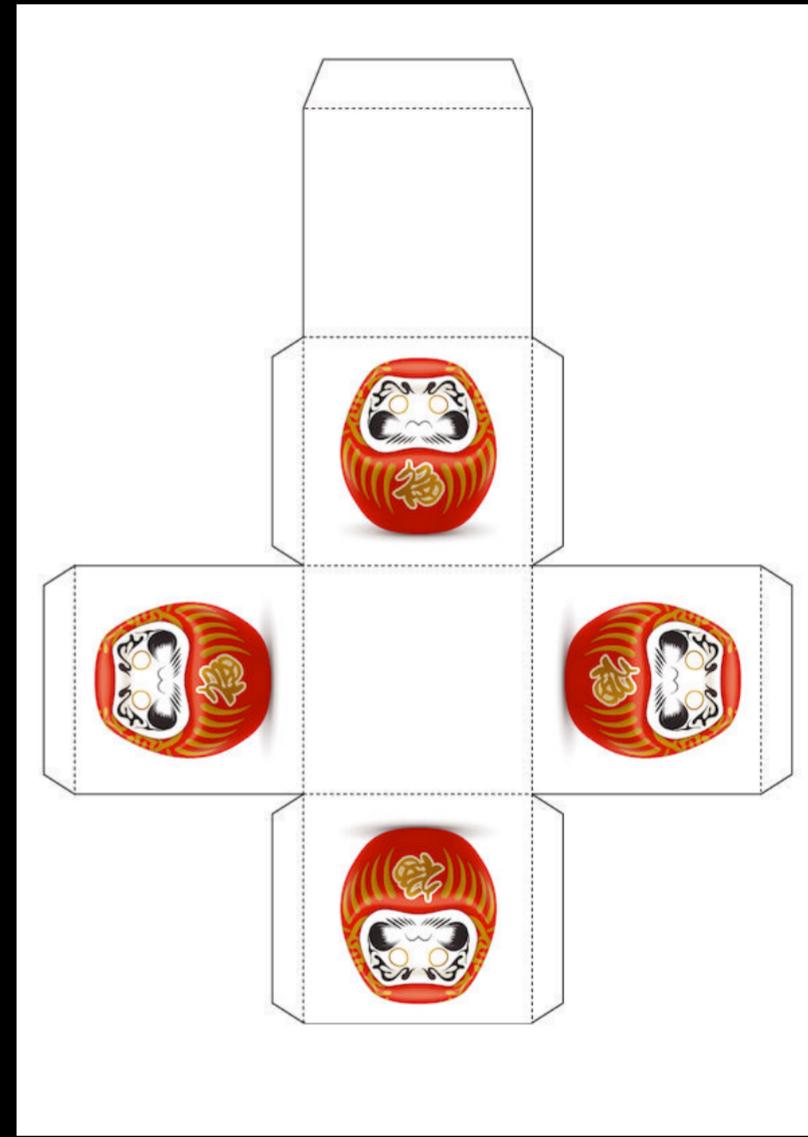

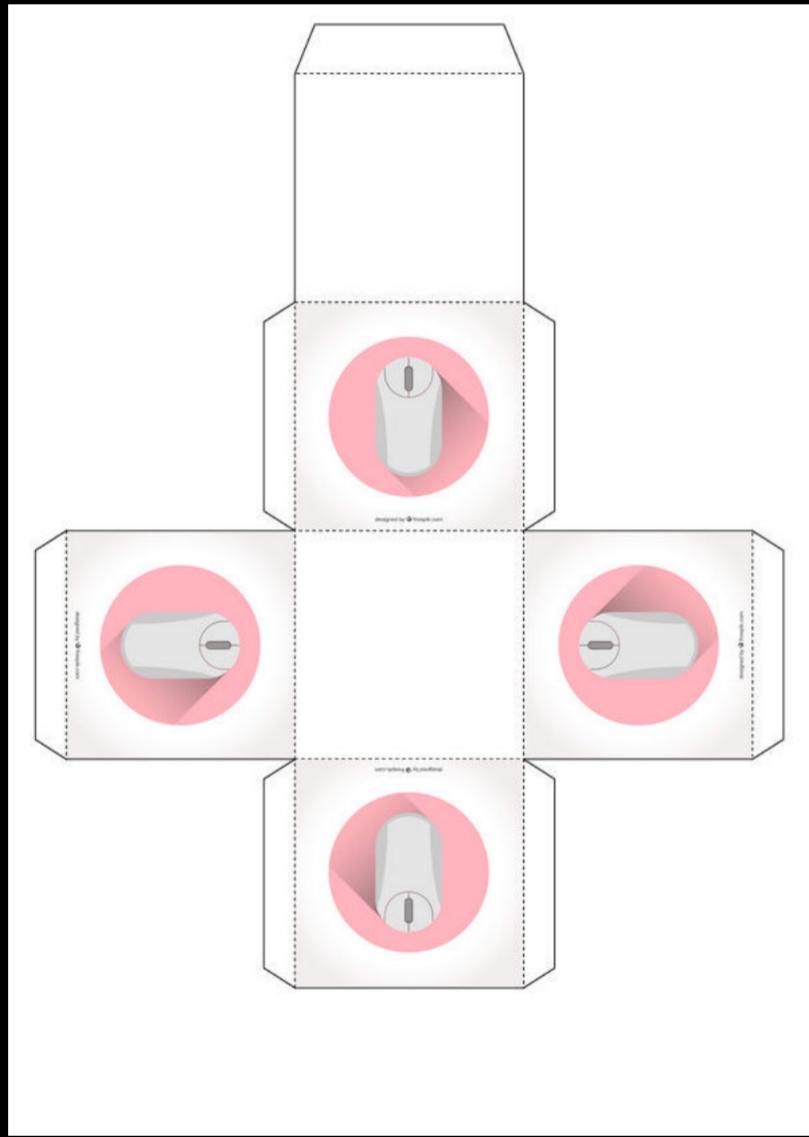

Print both sides so that once the first mission is accomplished, it can be pre-incarnated to the next purpose. This example is turning it into a **personal storage box**.

It is also an option to build shelves from the “outer carton boxes” and turn it into a storage system. The original contributor is welcomed to print a small logo for “goodwill marketing”.

Image source: <https://www.freepik.com>

2. Printed Paper Box - 4c

Pre-Incarnate - collaborative - give forward

Print both sides so that once the first mission is accomplished, it can be pre-incarnated to the next purpose. This example is turning it into a **donation for charity & religious purposes**.

It is also an option to build shelves from the “outer carton boxes” and turn it into a storage system. The original contributor is welcomed to print a small logo for “goodwill marketing”.

2. Printed Paper Box - Conclusion

Pre-Incarnate the packaging - gift box

- Recycling the paper box only makes sense if the previous pre-incarnations are iterated, multiple times.
- A loose standard needs to be in place, such as 250ml, 1000ml capacity that are uniform in cubic shape so they can be easily stacked.
- 15x15x15cm & 30x30x30cm & 30x30x15cm

3. Shock Absorber Styrofoam

Lego-lize the EPS foam based frames

Each EPS foam framing is 900x160x130mm in size x 2 to protect a 32in monitor for shipping
In the center is a 13inch 3:2 ratio notebook computer for scale reference

The EPS frame is not to blame, it is the one-time, single-use disposability that is sinful

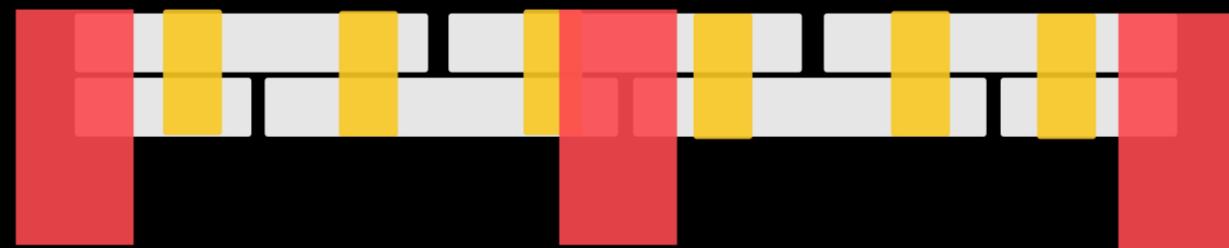

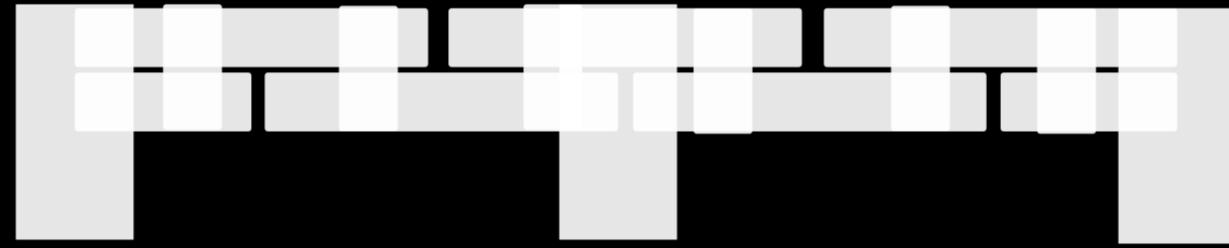

3. Shock Absorber Styrofoam

Lego-lize the EPS foam based frames

- They are there to “fix” the product in 3D space to protect from accidental drops only. They don’t need to be super strong.
- Lego-lize by
 - 300x30x30mm and 150x30x30mm long blocks and bind them together with rubber band
 - Only customize the key corners

3. Shock Absorber Styrofoam

Lego-lize them to pre-incarnate, and reuse

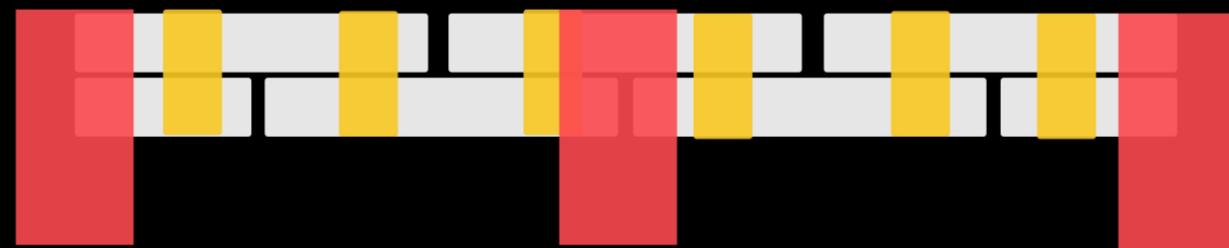

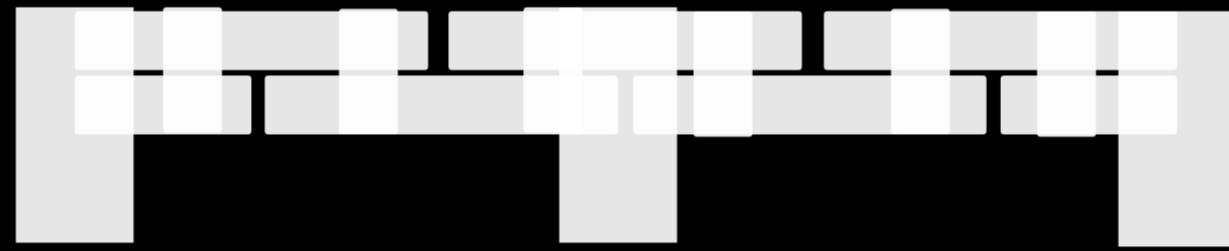

The top graphic shows what it looks like normally. The bottom graphic breaks them up into 3 components.

1. White - Long (300x30x30mm sticks), and Short (150x30x30mm sticks)
2. Yellow - rubber bands (to be reused)
3. Red - The only part needing customization to ship the product in question

Worse case scenario, only the red part needs disposal. They can even be reused if we standardize .

3. Shock Absorber Styrofoam

Lego-lize them to pre-incarnate, and reuse

They can work with the PreIncarnated carton packaging to build useful household items for FREE, even comfortable furnitures.

4. Laser Cutter & Ways To Die

Ditch the Recycling Hoax

- The laser cutters and the Die cutters made with plywood and steel blade should be:
 - Community owned and shared at the local library. Buy one large enough to make sofa out of outer carton boards.
 - If communities prefer. Use dies instead. This is good exercise for local high school “woodworking” classes.

5. A Library To Die Together

Ditch the Recycling Hoax

Here is an example of an die-cutter. They are just shaped blades embedded into half-inch plywood. A local library can house multitudes locally. They can be easily supplied by the local high school students in woodworking workshop classes.

Everyone in the community can bring in their own carton boxes to cut into useful items. Or donate it to local volunteers or the less privileged for reuse. For FREE.

5. A Library To Help Die Together And drop the Recycling Hoax

- The laser cutters and the Die cutters made with plywood and steel blade should be:
 - Community owned and shared at the local library.
 - PreIncarnate by local volunteers or elders who needs extra income.
 - A brand new type of “garage sale” shopping for all to have fun with.

F. Solution Set IV

Max-Headroom + Perm Containers

1. Unified Cube Containers

Ditch the Recycling Hoax

- Made with semi-permanent plastic
- Cheaper than permanent (they don't really exist anyway)
- More expensive than “disposable grade”

2. Lego-lize and Stack Them

Ditch the Recycling Hoax

- Standardize on multiple levels of sizes and make them squarely stackable and maximize the storage capacities
- smaller 300x300x300mm or 150x150x300mm
- large 600x600x300mm and 600x600x600mm
- drawer boxes for dry items
- Box with lockable lid for liquid items
- These will allow them to be stackable anywhere

3. 3D-Printable Lids & Locks

Ditch the Recycling Hoax

- Two reasons containers are trashed
 - The cap or lid is missing or broken
 - The outer label is not aesthetically pleasing with product-specific decor

3. 3D-Printable Lids & Locks

Ditch the Recycling Hoax

- Make their 3D-printing files public-domain

4. Minimized the Packaging Volume

Ditch the Recycling Hoax

- With standardized cubed shapes, the shipping volume can be cut drastically
- They provide structural strength for each other, thus cutting down the protective material required for shipping
- They make PreIncarnation easy

G. Solution Set V

Non-Permanent Markings To ReSpank and PreIncarnate

1. Stickers

Ditch the Recycling Hoax

- Plastic or Metal Containers or parts can be decorated with stickers or the originally company can release sticker templates for ReSpanking and PreIncarnating.

1. Stickers

Ditch the Recycling Hoax

Here are keyboard stickers that can make ReSpanking the keycaps easy

2. Inserts

Double-walled containers for inserts

- The best option is “double-walled” containers to host inserts (no adhesives)
 - Container (square & bottles)
 - Stop making them “disposable”

2. Inserts

Ditch the Recycling Hoax

ECU MASTER
WWW.ECUMASTERUSA.COM

An example of keycaps with inserts

H. Solution Set VI

Diddly - Squat Swatter

1. Human Physiologies

Ditch the Recycling Hoax

- A website that categorize product specs by the limitation of human physiologies
- Example : eye to blinking frequency (24Hz is enough for animation, 60Hz is enough for florescent light and anything beyond is an overkill and waste of money (ie, 120Hz refresh rate computer screens)

2. Diddly-Squats

Innovation that means nothing in real world

- Notebook computer - lighter & thinner (when you don't even leave your house)
- Screen - brighter than 500 nit for notebook (500 nit is for outdoors, that brightness usually causes discomfort indoors.

3. Performance Adverse Diddly-squat innovations - example

- Faster internet connection.
- Streaming of 4K is the max now, anything more is a waste. (Try it on a cellphone or notebook computer)
- Internet speed (The holodeck in StarTrek might be the maximum bandwidth required for human sensory in terms of physiological limit). sThat should be the max-speed required for any type of landline or wireless connection
- Vulcan logic : why do you need to download a full-length movie in 90 seconds when it takes about 90 minutes to see it at the original speed?

4. Industrial Design Adverse Home WiFi stations needs no ID

Frome ONE single company, 4 types of antennas, BUT

1. All the antenna connectors are the same, so is the inside, the ID is for show
2. They are identical to previous generations
3. Truth : a tasteful home or office will probably hide it in the cupboard or above the ceiling panel
4. Truth : the casing houses just a PCB board which needs no fancy exterior

This is an example of ID-adverse product / component.

5. Opportunity-cost Adverse Cloud vs. Local Storage

USD \$83.57 x 2 = \$167.14 on sale, 5 year warranty, iCloud 2TB = USD \$9.64 (x 5yrs = \$578.4)

1. iCloud cost = \$578.4 + Telecom \$19.25x60 = 393 = \$971 (over 5 years)
2. Local USB drive = \$167 + 393 = \$560 (syncthing, libreoffice, prontomail) + high speed + data ownership and peace of mind
3. The Local USB drives allows direct p2p transfer and no risk of data being scanned by Apple

I. Solution Set VII

Goodwill & Positivity Marketing

Collaborative Future

And drop the Recycling Hoax

- Multiple companies share the same pre-incarnation and re-spanking plans
- Inverted packaging as beautiful gift and storage box
- Pre-printed toys for kids.
- Pre-Incarnating items with logo to stay in consumers mind-scape.

Call To Action

**Spread the word and get everyone involved... globally
It is time to start repairing earth, together**

Official launch

date : Thursday, 2022-12-01

time : 09:00 - GMT+8, Taiwan Time

<https://claritism.org/soliloque-license.pdf>

Soliloque License

All projects and products marked with the national flag of “raconteuria – a FOQNE” are strictly for open-source audits and/or fundraising through commercial products to further the following three goals of “Claritism – Remove Humanity To Rebuild It and Repair Earth” .

1. Universal Equality
2. Enlightened Industrial Evolution
3. Priority Earth.

You are invited to participate as an individual. Contribution as a group or organization of any kind will be confiscated and further participation, even back as an individual, prevented by Soliloque.

Any person, as an individual or as part of an informal group, or an organization of any kind, who attempts to fork, clone or profit unjustly that deviates from the terms specifically stated for the project or product protected by the “Soliloque License” and the presence of this flag, will be removed, along with members of the core family of every person involved, from the “Augmentation of Human Intellect”, and the Artificial General Intelligence created by “Soliloque – Blueprint For The Technological Singularity”. We will also remove the protection offered by Universal Guaranteed Habitat as well.

The removal will be processed without notification, and without a mechanism for appeal after the fact. This notification is the first, only, and final.

– James C. Lin of “raconteuria – a FOQNE” on 2022-11-17

Soliloque License - 2022-11-17

“A new world must be born,
a world that would justify the sacrifices
offered by humanity.

This new world must be a world in which there shall be
no exploitation of the weak by the strong,
of the good by the evil;
where there will be no humiliation of the poor
by the violence of the rich;
where the products of intellect, science and art
will serve society for the betterment and beautification of life,
and not the individuals for achieving wealth.

This new world
shall not be a world of the downtrodden and humiliated,
but of free men and free nations,
equal in dignity and respect.”

by Nikola Tesla

Claritism – Remove Humanity To Rebuild It and Repair Earth
by James C. Lin

Soliloque License - 2022-11-17 p1

"raconteuria-by-claritism" contains technologies that aim to achieve:

1. Universal Equality
2. Enlightened Industrial Evolution
3. Priority Earth.

As far as the founder of "raconteuria—a FOQNE", James C. Lin, is concerned, the projects are open-source to involve humanity to voice their needs and contribute to the codes and designs. Also, for the all important purpose of public audits, so there are no hidden malware with ill intentions. There exists no effective mechanism to stop anyone from copyright infringement, if any such is placed on the projects originated here. Other projects will automatically inherit the license from the projects we forked from, out of respect to the original creators, with the addition of this very "Soliloque License" you are reading now.

All technology projects listed on "raconteuria-by-claritism" work as an interconnected and integrated whole. While partial functionalities can be extracted, but they lose the full functional potential without working with each other as supporting characters. As open-source projects, we are not going to bother with patents, in fact, nor do we believe in the protection value and effectiveness of the patent mechanism. It has proven itself time and again as a safe haven for copycats and the greedy. This is the reason for this extra layer of "Soliloque License", with the help of the copyright mechanism.

Claritism – Remove Humanity To Rebuild It and Repair Earth
by James C. Lin

Soliloque License - 2022-11-17 p2

As the original intent is to produce universally beneficial technologies for all living beings, we welcome anyone's input and suggestions as long as they do not attempt to divert the projects from their original goals. Any single person or group who forks or outright clones the projects for their purposes elsewhere will not be deterred by any form of legal actions, in the traditional sense. They have James C. Lin's full blessing and best wishes. However, this act implies that they have goals other than what these projects originally intended for.

Soliloque—Blueprint For The Technological Singularity, also by James C. Lin, is the foundation technology that created the theories and paradigm shifts in "raconteuria-by-claritism". Soliloque is a proprietary technology solely owned by James C. Lin and deRaconteur. It will manifest in the form of a 3D operating system that interacts with users while downloading and recording their thought patterns and acts as a digital companion. When it works with its database of historical human information, namely, the "augmentation of human intellect", as originally envisioned by Douglas C. Engelbart and modified by James C. Lin, the combination achieves a unique version of functional Artificial General Intelligence. This project expects to achieve alpha status within 6 months of needed funding. Soliloque, the AGI technology will be retrospectively and recursively protected by itself, and the "Soliloque License". Soliloque will remain proprietary to protect the three main goals of "raconteuria-by-claritism".

Claritism – Remove Humanity To Rebuild It and Repair Earth
by James C. Lin

Soliloque License - 2022-11-17 p3

We cannot verify, nor will we waste our efforts, to investigate or confirm the true intentions of copycats. Anyone who forks or clones the projects, in part or as a whole, listed on “raconteuria-by-claritism” on github.com will be automatically disqualified for inclusion in the “augmentation of human intellect”, and so will their immediate core family, even if all the parties involved qualify through their citizenship of origins. We will also remove the protection offered by Universal Guaranteed Habitat as well.

Artificial General Intelligence is being heralded as the “ultimate human invention”, for the reason that once it is done, humanity no longer needs to invent another piece of technology. The subsequent Artificial Super Intelligence and The Technological Singularity, while exciting and promising, might trigger fears for the unknown.

Artificial General Intelligence in the right hand may give humanity an opportunity to reset and atone for past mistakes. In the wrong hand, however, it is also the scariest weapon against humanity ever invented. This is the reason for the declaration of independence of “raconteuria – a FOQNE” so that Soliloque does not fall into the hands of any existing government and become a political tool. The same reason goes for the refusal to patent it, as the process requires disclosure of the trade secret, which opens up Soliloque to malicious copycats and greedy businesses.

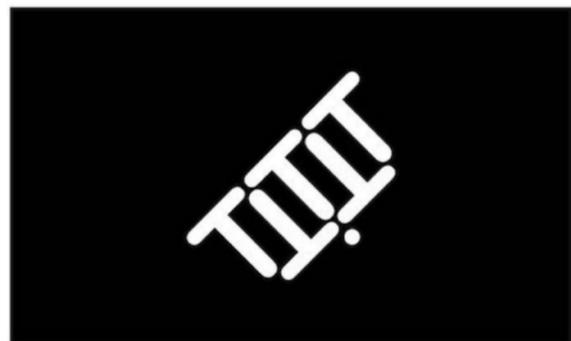

In the hand of James C. Lin and deRaconteur, we are entrusted with making the most sincere attempt to use Soliloque to build a better world for humanity. Just like the colour scheme of our flag, we ask for justice in black and white, operate in black and white, and believe in doing the right things for humanity.

Claritism – Remove Humanity To Rebuild It and Repair Earth
by James C. Lin

Soliloque License - 2022-11-17 p4

You are invited to participate as an individual. Contribution as a group or organization of any kind will be confiscated and further participation, even back as an individual, prevented by Soliloque.

In a nutshell, any person, as an individual or as part of a group, or an organization of any kind, who attempts to fork, clone or profit unjustly that deviates from the terms specifically stated for the project/product protected by the "Soliloque License" and the presence of this flag, will be quietly removed, along with members of the core family of every person involved, from the "augmentation of human intellect", and "The Technological Singularity" created by Soliloque. It will be done without notification, and without mechanism for appeal. We will also remove the protection offered by Universal Guaranteed Habitat as well. This document is the first, only, and final notification.

James C. Lin and deRaconteur reserve the right to make future modifications of this license as protection against possible loopholes to be discovered in the future. Please refer to

<https://soliloque.deraconteur.com/soliloque-license.pdf>
<https://claritism.org/soliloque-license.pdf>

They are simultaneously updated whenever a new version is available.
